Biofuels for Aviation Christopher Chuck, 2016-06-02 Biofuels for Aviation Feedstocks Technology and Implementation presents the issues surrounding the research and use of biofuels for aviation such as policy markets certification and performance requirements life cycle assessment and the economic and technical barriers to their full implementation Readers involved in bioenergy and aviation sectors research planning or policy making activities will benefit from this thorough overview The aviation industry s

commitment to reducing GHG emissions along with increasing oil prices have sparked the need for renewable and affordable energy sources tailored to this sector's very specific needs. As jet engines cannot be readily electrified, turning to biofuels is the most viable option. However, aviation is a type of transportation for which traditional biofuels such as bioethanol and biodiesel do not fulfill key fuel requirements. Therefore, different solutions to this situation are being researched and tested around the globe, which makes navigating this scenario particularly challenging. This book guides readers through this intricate subject, bringing them up to speed with its current status and future prospects, both from the academic and the industry point of view. Science and technology chapters delve into the technical aspects of the currently tested and the most promising technology in development, as well as their respective feedstocks and the use of additives as a way of adapting them to meet certain specifications. Conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction, and Fisher-Tropsch are explored, and their results are assessed for current and future viability. The book presents the current status of biofuels for the aviation sector, including technologies that are currently in use and the most promising future technologies, their production processes, and viability. It explains the requirements for certification and performance of aviation fuels and how that can be achieved by biofuels. It explores the economic and policy issues, as well as life cycle assessment, a comparative techno-economic analysis of promising technologies, and a roadmap to the future. It also explores conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction, and Fisher-Tropsch.

Biofuels Production and Processing Technology M.R. Riazi, David Chiaramonti, 2017-10-10. The importance of biofuels in greening the transport sector in the future is unquestionable, given the limited available fossil energy resources, the environmental issues associated to the utilization of fossil fuels, and the increasing attention to security of supply. This comprehensive reference presents the latest technology in all aspects of biofuels production, processing, properties, raw materials, and related economic and environmental aspects. Presenting the application of methods and technology with minimum math and theory, it compiles a wide range of topics not usually covered in one single book. It discusses development of new catalysts, reactors, controllers, simulators, online analyzers, and waste minimization, as well as design and operational aspects of processing units and financial and economic aspects. The book rounds out by describing properties, specifications, and quality of various biofuel products and new advances and trends towards future technology.

Global Governance of Civil Aviation Safety Nilgun Ozgur, 2022-09-30. This book indicates the shortcomings of the current international legal system and customary international norms that govern international aviation law to comply with contemporary air transport market realities. As the air transport market develops globally, the safety regime of civil aviation should also be governed and applied globally. In this book, the author departs from current international legal norms to examine the emerging legal field of global administrative law. Through that lens, the possibility of reconstructing the set of legal mechanisms that govern domestic and international administrative interaction in the global field of aviation safety is explored. This book demonstrates that a legal

system is never complete but always develops in tandem with changing needs i e the participation of the affected parties Exploring the principles of GAL theory contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety standards that would otherwise not be covered by customary international law In particular the principles of GAL theory regarding global governance and the public character of global regulations the role of individuals and states in global governance and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in practice It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these accessible to individuals by way of national courts Finally establishing public awareness of global aviation safety standards will eventually create greater pressure on states to implement and enforce them This book is in an area increasing academic and research interest of practitioners of public international aviation law global administrative law global governance and global aviation safety global air transport market regulations Megatrends and Air Transport Ruwantissa Abeyratne,2017-08-03 This book discusses megatrends and subsequently applies them to the air transport industry from a legal ethical and economic perspective Starting with a detailed discussion on what these megatrends are the book provides an essential overview of megatrends and air transport including analytical discussions on how megatrends could affect basic issues such as nationalism and sovereignty market access in air transport and commercial space transport It also delves into the rights of the airline passenger as affected by megatrends Further the book analyses a broad range of topics including the digital transformation of air transport technology and air transport robotic pilots and their legal ramifications the human robot interface and the law with focus on the pilot cognitive computing and issues of empowerment and connectivity It discusses in detail United Nations initiatives and initiatives of the International Civil Aviation Organization considering aspects such as the new world order e trends and air transport apps that make air travel easier and apps designed to help the aviation authorities Further topics include artificial intelligence and air transport and related technical ethical and economic issues as well as a legal inquiry into manufacturer s defects design defects and liability for failure to warn of defects Questions are posed and answers provided on the effects of artificial intelligence and legal issues stemming from its use in air transport Two major discussions follow on millennials and air transport and on the Internet of everything as related to air transport The conclusion ties in megatrends with air transport and offers the industry a way forward for adapting to these trends **Economics of Air Law** Ruwantissa Abeyratne,2025-10-10 In a world where air transport is as much a theatre of geopolitics as it is a conduit of commerce Economics of Air Law Intersections of Commerce Policy and the Governance of the Skies is an inquiry into the intersecting legal and economic tectonics of international civil aviation This new book addresses the intricacies of market access aviation related goods and environmental market based measures while confronting the impact of global tariffs This is a rigorous exposition of how law is made and applied but also how it is lived bent and sometimes broken in the face of sovereign will economic retaliation and

ideological divergence The reader is guided through the labyrinth of bilateral aviation diplomacy under China's Belt and Road Initiative the existential frailty of open skies agreements in a fractured legal order and the fragile optimism of climate governance under CORSIA and other market based constructs International law particularly in aviation is no longer a monolith but a contested terrain of plural interpretations political subtexts and interpretive communities It is a reference work for practitioners policymakers scholars and students
