Chandrasegaran, 2017-02-28 This book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school It suggests teaching approaches based on research data to address students common misconceptions Detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included The science

education literature extensively documents the findings of studies about students' misconceptions or alternative conceptions about various science concepts. Furthermore, some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these misconceptions among high school science students. These studies, however, are largely unavailable to classroom practitioners, partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them. In response, this book offers an essential and easily accessible guide.

Since then, the literature has exploded, offering a wider range of remediation practices for all levels of learners in all health professions throughout the world. This new edition continues to offer evidence-based, theory-informed, and pragmatic approaches to identifying and remediating trainees who cannot yet perform to standards. Illustrative case studies frame practical and programmatic advice from experienced front-line educators. All original chapters have been updated, and there are 21 brand-new chapters. Of the 73 chapter authors, 52 are new to this edition, broadening the book's relevance internationally and across the health professions. This book is required reading for all those committed to ensuring health professionals are ready and able to serve the health of the public.
