build a site that's smart in both senses of the word. It looks good and is intelligent too. You'll learn how to change the entire look of the site using PHP to serve up different stylesheets each month. You'll also build a contact form protected against email injection attacks. All of Dreamweaver's PHP server behaviors are put through their paces and you'll even make some custom server behaviors that will come in useful on any site you create. Two chapters take you through the setup process with step-by-step instructions for both Windows and Mac OS X helping you make the right choices: Apache or IIS, Remote or local testing. There are even instructions on how to set up virtual hosts on your own computer. And in the unlikely event that things go wrong, there's plenty of troubleshooting advice too. In this book we look specifically at using Dreamweaver's built-in server behaviors to build dynamic web sites using PHP and MySQL, the world's most popular open source server-side language and database server combination, which are both reliable, powerful, and open source and therefore free to use. This version of Dreamweaver includes more powerful support for PHP and MySQL than ever before and we'll show you how to make this work for you. No previous experience of PHP or MySQL is necessary to use this book. Examples built throughout the book include a content management system and an online image gallery. All examples are designed to meet modern usability requirements and be web standards compliant. [Beginning ASP.NET in VB .NET](#) Matthew MacDonald, 2004-01-27
