Advanced Mathematics For Economists Static And Dynamic Optimization:

Advanced Math for Economics Peter Lambert, 1985 This book contains a compact accessible treatment of the main mathematical topics encountered in economics at an advanced level moving from basic material into the twin areas of static and dynamic optimization Nearly half of the book is devoted to a survey of univariate calculus matrix algebra and multivariate calculus This fundamental material is made vigorous by the inclusion of a variety of applications The later chapters focus on the Lagrange multiplier technique when it will work why it works and what economic insights it yields The properties of maximum value functions and duality are explored as are the Hamiltonian conditions for dynamic problems in the optimal control format Dynamic programming and the calculus of variations are also covered Much of the discussion proceeds at a heuristic level and by worked example but the theorems and proofs required by the most analytical user are also to be found The underlying message is that the language of mathematics can be productive giving expression to the ideas and facilitating approaches from which insights flow that may be hard to come by in other ways The book will be particularly useful for final year undergraduates doing mathematics for economists courses and postgraduate students

Mathematical Modeling in Economics, Ecology and the Environment Natali Hritonenko, Yuri Yatsenko, 2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations

Financial Economics, Risk And Information (2nd Edition) Marcelo Bianconi, 2011-11-29 *Financial Economics Risk and Information* presents the fundamentals of finance in static and dynamic frameworks with focus on risk and information The objective of this book is to introduce undergraduate and first year graduate students to the methods and solutions of the main problems in finance theory relating to the economics of uncertainty and information The main goal of the second edition is to make the materials more accessible to a wider audience

of students and finance professionals The focus is on developing a core body of theory that will provide the student with a solid intellectual foundation for more advanced topics and methods The new edition has streamlined chapters and topics with new sections on portfolio choice under alternative information structures The starting point is the traditional mean variance approach followed by portfolio choice from first principles The topics are extended to alternative market structures alternative contractual arrangements and agency dynamic stochastic general equilibrium in discrete and continuous time attitudes towards risk and towards inter temporal substitution in discrete and continuous time and option pricing In general the book presents a balanced introduction to the use of stochastic methods in discrete and continuous time in the field of financial economics

Intriligator, 1971-01-01 Mathematical Optimization and Economic Theory provides a self contained introduction to and survey of mathematical programming and control techniques and their applications to static and dynamic problems in economics respectively It is distinctive in showing the unity of the various approaches to solving problems of constrained optimization that all stem back directly or indirectly to the method of Lagrange multipliers In the 30 years since its initial publication there have been many more applications of these mathematical techniques in economics as well as some advances in the mathematics of programming and control Nevertheless the basic techniques remain the same today as when the book was originally published Thus it continues to be useful not only to its original audience of advanced undergraduate and graduate students in economics but also to mathematicians and other researchers interested in learning about the applications of the mathematics of optimization to economics The book covers in some depth both static programming problems and dynamic control problems of optimization and the techniques of their solution It also clearly presents many applications of these techniques to economics and it shows why optimization is important for economics Audience mathematicians and other researchers who are interested in learning about the applications of mathematical optimization in economics as well as students at the advanced undergraduate and beginning graduate level A basic knowledge of analysis and matrix algebra is recommended Two appendices summarize the necessary mathematics *Bulletin - Institute of Mathematical Statistics* Institute of Mathematical Statistics, 1987
