

Appendix B – Using Other Technologies

Section 2: Finding Regressions Using Excel (Mac)

When given a set of data, you will frequently need to find a regression model using that data. In Appendix A, you saw that you can find many regression models using a graphing calculator. One limitation of the calculator is that, when you are finished creating your model, you have no way to save the work you have done so that you can include it in documents, such as Word documents.

The spreadsheet software Excel can fill this need. Using steps that are similar to what you used with your graphing calculator, you can create scatterplots and find regression models and values for r^2 or R^2 . In this section, you can work through the process needed to create graphs that can be saved and/or imported into other documents.

In this section, all screenshots will show the Mac version of Excel 2008. See Appendix B, Section 1 for examples worked using Excel 2010 for a PC.

Operations in Excel are performed on data that is entered into rectangles, called cells. Each cell in a spreadsheet has a unique name consisting of the letter corresponding to the column it is in and the number corresponding to the row. So cell D8 is in column D, row 8.
