**The Builder** ,1884 **Architecture--art Or Profession?** Mark Crinson,Jules Lubbock,1994 Architects are perhaps the most important people involved in shaping the built environment so the ideas they receive in the course of their training are a major influence upon the buildings and cities of the future Crinson and Lubbock present a bold new perspective on the evolution of the British architect from Wren to post modernism and beyond and provide the first general history of architectural education making an important contribution to current debates The Prince of Wales views on modern architecture and the need for a change in the way architects are trained has attracted enormous support from the public resulting in architects and their training being under the spotlight more than ever The drive to define and promote the architectural profession that began in the eighteenth century and reached its apogee in the 1960s has now begun to unravel How has this happened What relation does an architect s education have to the built environment What lessons are there from the past This book will be of interest to students lecturers and all those interested in the debates around contemporary architecture

[Gender Equity in Science and Engineering](#) Diana Bilimoria,Xiangfen Liang,2012-02-06 Women faculty s participation in academic science and engineering is critical for future US global competitiveness yet their underrepresentation particularly in senior positions remains a widespread problem To overcome persistent institutional resistance and barriers to change the NSF ADVANCE institutional transformation initiative instituted in 2001 seeks to increase the workforce participation of women faculty in academic science and engineering through systematic institutional transformation This book assesses the equity diversity and inclusion outcomes of the changes underway at 19 universities It provides a comprehensive stand alone description of successful approaches to increase the recruitment advancement and retention of women faculty throughout the academic career pipeline The findings show that targeted institutional transformation at these 19 U S universities has resulted in significant increases in women faculty s workforce participation as well as improved gender equity and inclusion Analyses by discipline show that the greatest changes have occurred within engineering and natural science disciplines at these universities Yet the results also point to the overall continued underrepresentation of women faculty in academic science and engineering at the nation s research universities A framework of organizational change is derived to serve as a template to academic and other organizations seeking transformation to enhance gender equity diversity and inclusion

**High-performance Construction Materials: Science And Applications** Caijun Shi,Yi-lung Mo,2008-06-11 This book describes a number of high performance construction materials including concrete steel fiber reinforced cement fiber reinforced plastics polymeric materials geosynthetics masonry materials and coatings It discusses the scientific bases for the manufacture and use of these high performance materials Testing and application examples are also included in particular the application of relatively new high performance

construction materials to design practice Most books dealing with construction materials typically address traditional materials only rather than high performance materials and as a consequence do not satisfy the increasing demands of today s society On the other hand books dealing with materials science are not engineering oriented with limited coverage of the application to engineering practice This book is thus unique in reflecting the great advances made on high performance construction materials in recent years This book is appropriate for use as a textbook for courses in engineering materials structural materials and civil engineering materials at the senior undergraduate and graduate levels It is also suitable for use by practice engineers including construction materials mechanical and civil engineers      **The United States Catalog** Ida M.
