### **1.1.1**

**What is the difference between a compiler and an interpreter?**

***Answer***

**A compiler is a program that can read a program in one language - the source language - and translate it into an equivalent program in another language - the target language and report any errors in the source program that it detects during the translation process.**

**Interpreter directly executes the operations specified in the source program on inputs supplied by the user.**

### **1.1.2**

**What are the advantages of: (a) a compiler over an interpreter (b) an interpreter over a compiler?**

***Answer***

**a. The machine-language target program produced by a compiler is usually much faster than an interpreter at mapping inputs to outputs.**

**b. An interpreter can usually give better error diagnostics than a compiler, because it executes the source program statement by statement.**
