Computational Methods of Linear Algebra D. K. Faddeev, 1993 **Computational Methods of Linear Algebra** Granville Sewell, 2005-09-19 Learn to write programs to solve linear algebraic problems The Second Edition of this popular textbook provides a highly accessible introduction to the numerical solution of linear algebraic problems Readers gain a solid theoretical foundation for all the methods discussed in the text and learn to write FORTRAN90 and MATLAB r programs to solve problems This new edition is enhanced with new material and pedagogical tools reflecting the author's hands on teaching experience including A new chapter covering modern supercomputing and parallel programming Fifty percent more examples and exercises that help clarify theory and demonstrate real world applications MATLAB r versions of all the FORTRAN90 programs An appendix with answers to selected problems The book starts with basic definitions and results from linear algebra that are used as a foundation for later chapters The following four chapters present and analyze direct and iterative methods for the solution of linear systems of equations linear least squares problems linear eigenvalue problems and linear programming problems Next a chapter is devoted to the fast Fourier transform a topic not often covered by comparable texts The final chapter features a practical introduction to writing computational linear algebra software to run on today's vector and parallel supercomputers Highlighted are double precision FORTRAN90 subroutines that solve the problems presented in the text The subroutines are carefully documented and readable allowing students to follow the program logic from start to finish MATLAB r versions of the codes are listed in an appendix Machine readable copies of the FORTRAN90 and MATLAB r codes can be downloaded from the text's accompanying Web site With its clear style and emphasis on problem solving this is a superior textbook for upper level undergraduates and graduate students

Computational Linear Algebra Robert E. White, 2023-04-21 Courses on linear algebra and numerical analysis need each other Often NA courses have some linear algebra topics and LA courses mention some topics from numerical analysis scientific computing This text merges these two areas into one introductory undergraduate course It assumes students have had multivariable calculus A second goal of this text is to demonstrate the intimate relationship of linear algebra to applications computations A rigorous presentation has been maintained A third reason for writing this text is to present in the first half of the course the very important topic on singular value decomposition SVD This is done by first restricting consideration to real matrices and vector spaces The general inner product vector spaces are considered starting in the middle of the text The text has a number of applications These are to motivate the student to study the linear algebra topics Also the text has a number of computations MATLAB is used but one could modify these codes to other programming languages These are either to simplify some linear algebra computation or to model a particular application
