developments in wood products and their application as structural components The focus of the included works is to draw
attention to new research and real applications from both researchers and practitioners and to present new and innovative
ideas in this significant field Rapid advances have recently been made in the development and processing of innovative
ecologically friendly wood products A variation of new structural shapes can now be fabricated and used to construct
buildings and bridges which have minimal impact on the environment Wood is particularly appealing since it is renewable
and has no carbon footprint when it is harvested in a sustainable way Timber structures are ecologically sound and
comparatively low cost The material lends itself to ground breaking designs and new types of composites offer reliable robust
