Fig: Lateral earth pressure distribution

Total earth pressure can also be found directly by calculating the area of the lateral earth pressure diagram.

$$P = \frac{1}{2} \times k\gamma H \times H = \frac{1}{2} k\gamma H^2$$

The total force acts at a height of $\frac{H}{3}$ from the base (centroid of pressure diagram).

Limit Analysis in Soil Mechanics W.F. Chen,X.L. Liu,1990 During the last ten years our understanding of the perfect plasticity and the associated flow rule assumption on which limit analysis is based has increased considerably Many extensions and advances have been made in applications of limit analysis to the area of soil dynamics in particular to earthquake induced slope failure and landslide problems and to earthquake induced lateral earth pressures on rigid retaining structures The purpose of the book therefore is in part to discuss the validity of the upper bound work or energy method of limit analysis in a form that can be appreciated by a practicing soil engineer and in part to provide a compact and up to date summary of recent advances in the applications of limit analysis to earthquake induced stability problems in soil mechanics
