**Sustainable Construction** Mahdi O. Karkush, Deepankar Choudhury, 2022-03-19 This book contains selected articles from the Second International Conference on Geotechnical Engineering Iraq ICGE Iraq held in Akre Duhok Iraq from June 22 to 23 2021 to discuss the challenges opportunities and problems of geotechnical engineering in projects Also the conference includes modern applications in structural engineering materials of construction construction management planning and

design of structures and remote sensing and surveying engineering The ICGE Iraq organized by the Iraqi Scientific Society of Soil Mechanics and Foundation Engineering ISSSMFE in cooperation with Akre Technical Institute Duhok Polytechnic University College of Engineering University of Baghdad and Civil Engineering Department University of Technology The book covers a wide spectrum of themes in civil engineering including but not limited to sustainability and environmental friendly applications The contributing authors are academic and researchers in their respective fields from several countries This book will provide a valuable resource for practicing engineers and researchers in the field of geotechnical engineering structural engineering and construction and management of projects

*Foundation Engineering Analysis and Design* An-Bin Huang, Hai-Sui Yu, 2017-12-06 One of the core roles of a practising geotechnical engineer is to analyse and design foundations This textbook for advanced undergraduates and graduate students covers the analysis design and construction of shallow and deep foundations and retaining structures as well as the stability analysis and mitigation of slopes It progressively introduces critical state soil mechanics and plasticity theories such as plastic limit analysis and cavity expansion theories before leading into the theories of foundation lateral earth pressure and slope stability analysis On the engineering side the book introduces construction and testing methods used in current practice Throughout it emphasizes the connection between theory and practice It prepares readers for the more sophisticated non linear elastic plastic analysis in foundation engineering which is commonly used in engineering practice and serves too as a reference book for practising engineers A companion website provides a series of Excel spreadsheet programs to cover all examples included in the book and PowerPoint lecture slides and a solutions manual for lecturers Using Excel the relationships between the input parameters and the design and analysis results can be seen Numerical values of complex equations can be calculated quickly non linearity and optimization can be brought in more easily to employ functioned numerical methods And sophisticated methods can be seen in practice such as p y curve for laterally loaded piles and flexible retaining structures and methods of slices for slope stability analysis

an effort to stabilize the granular and subgrade layer at six shoulder test sections and the results of a laboratory box study where a shoulder section overlying a soft foundation layer was simulated Based on the research described in this report the following changes are proposed to the construction and maintenance methods for granular shoulders A minimum CBR value for the granular and subgrade layer should be selected to alleviate edge drop off and rutting formation For those constructing new shoulder sections the design charts provided in this report can also be used to predict the behavior of existing shoulders In the case of existing shoulder sections overlying soft foundations the use of geogrid or fly ash stabilization proved to be an effective technique for mitigating shoulder rutting
