Speech Recognition Claudio Becchetti,Lucio Prina Ricotti,1999-05-04 The capabilities of Automatic Speech Recognition are expanding quickly and this practical book helps engineers take advantage of the technology immediately featuring C code for implementing ASR algorithms a process for creating an interface quickly and methods for testing and developing new systems **Automatic Speech and Speaker Recognition** Chin-Hui Lee,Frank K. Soong,Kuldip K. Paliwal,2012-12-06 Research in the field of automatic speech and speaker recognition has made a number of significant advances in the last two decades influenced by advances in signal processing algorithms architectures and hardware These advances include the adoption of a statistical pattern recognition paradigm the use of the hidden Markov modeling framework to characterize both the spectral and the temporal variations in the speech signal the use of a large set of speech utterance examples from a large population of speakers to train the hidden Markov models of some fundamental speech units the organization of speech and language knowledge sources into a structural finite state network and the use of dynamic programming based heuristic search methods to find the best word sequence in the lexical network corresponding to the spoken utterance Automatic Speech and Speaker Recognition Advanced Topics groups together in a single volume a number of important topics on speech and speaker recognition topics which are of fundamental importance but not yet covered in detail in existing textbooks Although no explicit partition is given the book is divided into five parts Chapters 1 2 are devoted to technology overviews Chapters 3 12 discuss acoustic modeling of fundamental speech units and lexical modeling of words and pronunciations Chapters 13 15 address the issues related to flexibility and robustness Chapter 16 18 concern the theoretical and practical issues of search Chapters 19 20 give two examples of algorithm and implementational aspects for recognition system realization Audience A reference book for speech researchers and graduate students interested in pursuing potential research on the topic May also be used as a text for advanced courses on the subject Advanced Algorithms and Architectures for Speech Understanding Giancarlo Pirani,2013-11-09 This book is intended to give an overview of the major results achieved in the field of natural speech understanding inside ESPRIT Project P 26 Advanced Algorithms and Architectures for Speech and Image Processing The project began as a Pilot Project in the early stage of Phase 1 of the ESPRIT Program launched by the Commission of the European Communities After one year in the light of the preliminary results that were obtained it was confirmed for its 5 year duration Even though the activities were carried out for both speech and image understand ing we preferred to focus the treatment of the book on the first area which crystallized mainly around the CSELT team with the valuable cooperation of AEG Thomson CSF and Politecnico di Torino Due to the work of the five years of the project the Consortium was able to develop an actual and complete understanding system that goes from a continuously spoken natural language sentence to its meaning and the consequent access to a database When we started in 1983 we had some expertise in small vocabulary syntax driven connected word speech recognition using Hidden Markov
