

Programming Abstractions in C++

Eric S. Roberts and Julie Zelenski

This course reader has had an interesting preliminary history that is worth being aware of: the genesis of the C++ language itself. Just as Pascal (Programming) is a close relative of C, so was implemented on top of a C language base, this reader began its life as Eric Roberts's textbook *Programming Abstractions for C* (Addison-Wesley, 1996). In 2000-01, Julie Zelenski updated it for use with the C++ programming language, which we began using in CS101B and CS102B during that year.

Although the revised text worked fairly well in the course, CS101B and CS102B have evolved in recent years so that their contexts are largely new to the organization of the book. This year, we're engaged in the process of revising the book so that students in those courses can use it as both a reference and a textbook. As always, that process takes a considerable amount of time, and there are likely to be some conflicts as we update the reader. At the same time, we're convinced that the material in CS101B and CS102B is tremendously exciting and will be able to carry us through a quarter or two of instability, and we will end up with an even better course in the future.

We want to thank our colleagues in Stanford, several generations of student leaders, and special thanks to Dan Marino and Mark Helmus, and to many students over the years—all of whom have helped make it so exciting to teach this wonderful material.
