This book presents recent contributions and significant developments, advanced issues, and challenges in real-world problems and applications. Most of the optimization problems involve different types of constraints. These problems are called constrained optimization problems (COPs). The optimization of constrained optimization problems is considered a challenging task since the optimum solution must be feasible. In their original design, evolutionary algorithms (EAs) are able to solve unconstrained optimization problems effectively. As a result, in the past decade, many researchers have developed a variety of constraint-handling techniques incorporated into EAs' designs to counter this deficiency. The main objective for this book is to make available a self-contained collection of modern research addressing the general constrained optimization problems in many real-world applications using nature-inspired optimization algorithms. This book is suitable for a graduate class on optimization but will also be useful for interested senior students working on their research projects. **Image Processing with LabVIEW and IMAQ Vision**, Thomas Klinger, 2003. This book shows how LabVIEW and especially IMAQ Vision can be used for the realization of common image processing tasks. It covers key issues like image distribution and generation, and technologies such as FireWire and Camera Link are discussed in depth. *LabVIEW Graphical Programming*, Gary Johnson, Richard Jennings, 2006-07-17. LabVIEW is an award-winning programming language that allows engineers to create virtual instruments on their desktop. This new edition details the powerful features of LabVIEW 8.0. Written in a highly accessible and readable style, *LabVIEW Graphical Programming* illustrates basic LabVIEW programming techniques, building up to advanced programming concepts. New to this edition is study material for the CLAD and CLD exams. **Man-Machine Interactions 3**, Dr. Aleksandra Gruca, Tadeusz Czachórski, Stanisław Kozielski, 2013-10-01.
