Design of experiments in chemical engineering Argafena Ostapyuk, Natasha Opokin, In this book we discuss about the design of experiments in chemical engineering a practical guide In the first chapter we discussed about the trends in packaging of semiconductors are towards miniaturization and high functionality Increased functional density and reduced I O spacing are the market trends In the second chapter we discussed about the develop and operate process following a Quality by Design approach where quality is built into the product and the process based on a high level of product knowledge and process understanding In the thirds chapter we discussed about the plasma treatment was applied to the reduction of metallic oxide has been examined using low pressure plasma containing hydrogen via radio frequency microwave photochemical or electrochemicl methods and heating In the fourths chapter we discussed about the Lipids function as improtant storage compounds to maintain cellular activities Lipids store high reducing power and energy since those biosynthetic processes require high amount of reducing cofactors and ATP In the fifths chapter we discussed about the highly instrumented single screw extruder has been

used to study the effect of polymer rheology on the thermal efficiency of the extrusion process In the sixes chapter we discussed about the sorption experiments using the Aspergillums nagger fungus for cadmium removal were carried out to study the factors influencing and optimizing the bio sorption of this metal In the sevenths chapter we discussed about the first chapter we discussed about the development of new techniques for treatment of wastewater with high salinity from the petroleum industry has been a challenge due to the increase in production in Brazil In the eights chapter we discussed about the favorite alternative hosts for the expression of heterologous proteins for research industrial or medical In the ninths chapter we discussed about the occurences of metal ions in the aquatic environment has been concern because of their toxicity while the accumulation may pose various hazards for human health and environment In the thenth chapter we discussed about the electrochemical energy conversion and storage is one of the important strategies to address the strong demand on clean energy supply In the eleventh chapter we discussed about the Silver is valued as ornamental and coinage metal since ancient times It is a precious metal with a number of industrial applications especially in photo imaging being the most malleable and ductile of all metals In the twelve chapters we discussed about the oxidation is the transfer of electrons from one atom to another and represents an essential part of both aerobic life and our metabolism since oxygen is the ultimate electron acceptor in the electron flow system that produces energy in the form of ATP
