**Treatise on Water Science** ,2010-09-01 Water quality and management are

of great significance globally as the demand for clean potable water far exceeds the availability. Water science research brings together the natural and applied sciences, engineering, chemistry, law, and policy, and economics, and the Treatise on Water Science seeks to unite these areas through contributions from a global team of author experts. The 4 volume set examines topics in depth with an emphasis on innovative research and technologies for those working in applied areas. Published in partnership with and endorsed by the International Water Association (IWA), demonstrating the authority of the content. Editor in Chief Peter Wilderer, a Stockholm Water Prize recipient, has assembled a world class team of volume editors and contributing authors. Topics related to water resource management, water quality, and supply, and handling of wastewater are treated in depth.

**Integrated Water Management in Canada** Dan Shrubsole, Dan Walters, Barbara Veale, Bruce Mitchell, 2018-12-07. This volume provides readers with an opportunity to learn from front line water managers of watershed based agencies across Canada about integrated water management or integrated water resource management. In common with practice in much of the world, the responsibility for implementing integrated watershed management in Canada is fragmented. Each province and territory in Canada has developed unique approaches or governance models to guide decision making in that regard. Thus, this edited volume enables readers from around the world to gain insight on the best practices in Canada for achieving success and addressing barriers to implement IWM. Although there remains non consensus about how to best approach river basin management, some of the main observations include: There is a need to balance a focus on the big picture with scoping the scale and scope of planning activities in order that feasible and effective solutions can be implemented. Three types of integration are popular among the agencies included in the book: i) among environment, economy, and society; ii) interactions between people and the environment; and iii) integration or coordination of administrative activities. Much more attention is required to achieving effective engagement from Indigenous communities. The chapters were originally published in a special issue of the International Journal of Water Resources Development.
