**Minimalist syntax**

Minimalist syntax is a theory of syntax that focuses on the core operations of the grammar: **Merge**, **Move**, and **Erase**. It is based on the idea that the syntax is a computation system that builds a structure of syntactic objects (SOs) from a lexicon.

The **Computation System** consists of the following components:

- Lexicon:** A set of lexical items, each with a **numerical feature** (representing its position in the lexicon) and a **syntactic feature** (representing its syntactic class).
- Initial Merge:** The process of selecting a lexical item from the lexicon and merging it with the root node of the syntax tree.
- Minimalist Program (MP):** A set of operations that build the syntax tree:
  - Merge:** The process of selecting a lexical item from the lexicon and merging it with the root node of the syntax tree.
  - Move:** The process of moving a syntactic object from one position in the syntax tree to another.
  - Erase:** The process of deleting a syntactic object from the syntax tree.
- Derivation:** A sequence of operations that build the syntax tree from the lexicon.
- Derivation Path:** A sequence of syntactic objects that are merged, moved, or erased during the derivation.
- Derivation Tree:** A tree structure that represents the derivation of a sentence.
- Final Structure:** The final structure of the syntax tree, which is the result of the derivation.

The **Minimalist Program** is defined by the following principles:

- Minimalist Merge:** The process of selecting a lexical item from the lexicon and merging it with the root node of the syntax tree.
- Minimalist Move:** The process of moving a syntactic object from one position in the syntax tree to another.
- Minimalist Erase:** The process of deleting a syntactic object from the syntax tree.
