Turbulence and Self-Organization Mikhail Ya Marov,Aleksander V. Kolesnichenko,2013-01-16 The book deals with the development of continual models of turbulent natural media Such models serve as a ground for the statement and numerical evaluation of the key problems of the structure and evolution of the numerous astrophysical and geophysical objects The processes of ordering self organization in an originally chaotic turbulent medium are addressed and treated in detail with the use of irreversible thermodynamics and stochastic dynamics approaches which underlie the respective models Different examples of ordering set up in the natural environment and outer space are brought and thoroughly discussed the main focus being given to the protoplanetary discs formation and evolution [The Statistical Mechanics of Irreversible Phenomena](#)

Pierre Gaspard,2022-07-28 This book provides a comprehensive and self contained overview of recent progress in nonequilibrium statistical mechanics in particular the discovery of fluctuation relations and other time reversal symmetry relations The significance of these advances is that nonequilibrium statistical physics is no longer restricted to the linear regimes close to equilibrium but extends to fully nonlinear regimes These important new results have inspired the development of a unifying framework for describing both the microscopic dynamics of collections of particles and the macroscopic hydrodynamics and thermodynamics of matter itself The book discusses the significance of this theoretical framework in relation to a broad range of nonequilibrium processes from the nanoscale to the macroscale and is essential reading for researchers and graduate students in statistical physics theoretical chemistry and biological physics *Excel Shortcuts and Hacks for Speed and Efficiency* Frank Green,2024-12-18 *Excel Shortcuts and Hacks for Speed and Efficiency* The Ultimate Guide to Mastering Excel In today s fast paced business world every second counts That s where this book *Excel Shortcuts and Hacks for Speed and Efficiency* comes in It is designed to help you maximize your productivity by equipping you with an arsenal of shortcuts hacks and time saving techniques for Microsoft Excel From the basics of data entry to complex data analysis this book has something for everyone Whether you re a seasoned Excel user or just starting out you ll find valuable insights that will streamline your workflow and unlock the full potential of this powerful spreadsheet software This book is not just a collection of tips and tricks it is a comprehensive guide that delves into the fundamentals of Excel It explains the underlying principles behind each shortcut and hack helping you understand how to use them effectively and when With clear step by step instructions and real world examples this book is easy to follow and apply empowering you to instantly boost your efficiency Furthermore the book s content is highly captivating and engaging It features a user friendly layout intuitive navigation and a conversational writing style that makes learning enjoyable and effortless Special emphasis has been placed on presenting information in a visually appealing and accessible manner with the use of screenshots illustrations and tables to enhance comprehension The educational value of this book is invaluable By mastering the techniques outlined within you ll gain a deeper understanding of Excel s capabilities and become proficient in data

manipulation analysis and presentation This enhanced skill set will not only make you more efficient but also boost your confidence and credibility in your professional endeavors

Non-equilibrium Statistical Physics with Application to Disordered Systems Manuel Osvlado Cáceres,2017-03-07 This textbook is the result of the enhancement of several courses on non equilibrium statistics stochastic processes stochastic differential equations anomalous diffusion and disorder The target audience includes students of physics mathematics biology chemistry and engineering at undergraduate and graduate level with a grasp of the basic elements of mathematics and physics of the fourth year of a typical undergraduate course The little known physical and mathematical concepts are described in sections and specific exercises throughout the text as well as in appendices Physical mathematical motivation is the main driving force for the development of this text It presents the academic topics of probability theory and stochastic processes as well as new educational aspects in the presentation of non equilibrium statistical theory and stochastic differential equations In particular it discusses the problem of irreversibility in that context and the dynamics of Fokker Planck An introduction on fluctuations around metastable and unstable points are given It also describes relaxation theory of non stationary Markov periodic in time systems The theory of finite and infinite transport in disordered networks with a discussion of the issue of anomalous diffusion is introduced Further it provides the basis for establishing the relationship between quantum aspects of the theory of linear response and the calculation of diffusion coefficients in amorphous systems

Managing Energy Risk Markus Burger,Bernhard Graeber,Gero Schindlmayr,2008-04-30 Mathematical techniques for trading and risk management Managing Energy Risk closes the gap between modern techniques from financial mathematics and the practical implementation for trading and risk management It takes a multi commodity approach that covers the mutual influences of the markets for fuels emission certificates and power It includes many practical examples and covers methods from financial mathematics as well as economics and energy related models
