

Double Number Line Diagram

We can use a **double number line diagram** to find many equivalent ratios.

Example:

A recipe for fizzy juice says, "Mix 5 cups of cranberry juice with 2 cups of soda water." The ratio of cranberry juice to soda water is **5:2**. Multiplying both ingredients by the same number creates equivalent ratios.

This double number line shows that the ratio **20:8** is equivalent to **5:2**. If you mix 20 cups of cranberry juice with 8 cups of soda water, it makes 4 times as much fizzy juice that tastes the same as the original recipe.

A Focus on Ratios and Proportions Marjorie M. Petit, Robert E. Laird, Matthew F. Wyneken, Frances R. Huntoon, Mary D. Abele-Austin, Jean D. Sequeira, 2020-05-17 This resource offers a groundbreaking effort to make mathematics education research on ratios and proportions readily accessible and understandable to preservice and in service teachers of grades 6 to 8 Using extensive annotated samples of student work and based on research gathered in the Ongoing Assessment Project OGAP *A Focus on Ratios and Proportions* teaches readers how students develop understanding and fluency involving ratio and proportion concepts Special features include A close focus on student work including 150 annotated pieces of student work to help teachers improve their ability to recognize assess and monitor their students errors and misconceptions as well as their developing conceptual understanding A focus on the OGAP Ratios and Proportions Progression based on research conducted with hundreds of teachers and thousands of pieces of student work Sections on how Common Core State Standards for Math CCSSM are supported by math education research Student work samples and vignettes to illuminate the research as well as end of chapter Looking Back questions and Instructional Links which allow teachers to analyze evidence of student thinking and strategies and consider

instructional responses An accompanying eResource available online offers an answer key as well as extensive explanation of the Looking Back questions Like A Focus on Multiplication and Division and A Focus on Fractions this book is designed to bridge the gap between what math education researchers know and what teachers need to know in order to better understand evidence in student work and make effective instructional decisions

It's All Relative Anne Collins,Linda Dacey,2024-11-01 For years students have been taught to cross multiply when presented with proportion problems Few understood what they were doing or why they were doing it Rarely were students invited to think about various representations to determine the relationship between the two ratios being compared The ideas and activities in this guide will help you provide students with the conceptual understanding of ratios and proportional thinking that is essential for solving real world problems and achieving success in higher level mathematics It s All Relative includes thirty modules which are aligned to specific Common Core State Standards Each module in this accessible spiral bound flipchart addresses specific mathematical practices and common misconceptions features timely classroom examples includes proven ready to use activities and provides ideas for adapting activities to meet the needs of individual learners The authors particularly emphasize how to use visual models tables tape diagrams graphs and double number lines to represent ratios and proportional thinking These visual models which may be new to many teachers enhance students conceptual understanding and improve their ability to solve a wide range of proportional reasoning problems

How Students Think When Doing Algebra Steve Rhine,Rachel Harrington,Colin Starr,2018-10-31 This book bridges research and practice to help teachers understand students algebraic thinking It covers five domains tied to CCSS topics and aims to accelerate early career teachers experience with student misconceptions and struggles The book is a valuable resource for both new and veteran math teachers
