

TIMBER CONSTRUCTION

Chris Arnold, Building Systems Development, USA

BACKGROUND

Wood construction is common for many single-family houses throughout the world. In areas where timber and wood materials are easily accessible, wood construction is often considered to be the cheapest and best approach for small housing structures.

Six main types of wood construction are listed in the encyclopedia. These types use all forms of timber available from logs to sawn/shaped timbers to smaller branches and leaves. These types also utilize various types of wall coverings from plant-based coverings to timber materials to earthen materials, such as mud or stone. The first type of wood construction is thatch construction, which is generally a traditional construction type. For examples of this type, see the traditional construction section of the encyclopedia. Other types include post-and-beam frame construction, walls with bamboo/reed mesh and post (wattle and daub), wooden frames with or without infill, and stud-wall frames with plywood/gypsum board sheathing. Two final types are wood panel construction and log construction.

Only some of the main types of wood construction are discussed in detail in the encyclopedia. The first of these construction types is stud-wall frame with plywood/gypsum board sheathing (Figure 1), which is popular worldwide and is the main type used in the United States (WHE Report 90), Canada (WHE Report 82), and Japan (WHE Report 86). For this type, walls are made of vertical timber elements of rectangular cross-section covered in light plywood or composite sheathing, with roofs made of timber members or prefabricated trusses, which are sheathed similar to the walls. The building foundations are usually concrete but sometimes are made of stone. In Japan, a post-and-beam frame is also constructed. It is similar to the stud-wall frame, except that it uses diagonal members to create its shear walls instead of sheathing. Horizontal timber construction (Figure 2) is found in parts of the Russian Federation, particularly in rural forested areas (WHE Report 56, Russian Federation). For this system, walls are made of horizontal sawn timber logs of square or circular cross-section joined without mechanical fasteners at the corners. The buildings have timber roofs and stone or concrete foundations. The final system of construction reviewed in the encyclopedia is wood panel construction (WHE Report 57, Russian Federation). This is typically found in the Russian Federation where its prefabricated panels are easily constructed for government low-income housing (Figure 3). Walls and floors are made of layered wood members with timber roofs and concrete foundations.

Alternate & Innovative Construction Systems for Housing, 2nd Ed BMTPC, 2025-08-01 India being one of the fastest growing economies in the world is witnessing transformative changes in terms of public investment private consumption structural reforms leading construction sector to reach 1.4 trillion by 2025 Coupled with rapid urbanization climate change Nationally Determined Contributions (NDCs) in terms of reduction of emission intensity by 30-35% by 2030 to achieve net zero emission by 2070 the business as usual approach for building the urban infrastructure including housing need to be superseded by cutting edge innovative productive technologies nurturing fast track affordable sustainable resilient growth The ubiquitous conventional construction practices of cast in situ brick mortar RCC construction shall have to be replaced by industrialized building systems comprising of off site construction techniques such as precast concrete construction prefabricated steel construction customized formworks sandwich panels 3D printing PPVC supplemented by digitalization BIM cloud computing construction robotics etc To bring perceptible changes the way we build Ministry of Housing Urban Affairs MoHUA Govt of India with BMTPC as technical partner conceptualized organized Global Housing Technology Challenge India (GHTC India) through which 54 new construction systems which are time tested proven globally

are identified as potential future building technologies for the country being promoted across the country. The six light house projects were also undertaken under PMAY U to showcase the effectiveness of these systems and adapt them for further replication. In order to build capacities and for better outreach, wider advocacy amongst building professionals about the new and emerging building materials and technologies for construction, MoHUA along with SPA New Delhi, BMTPC introduced an online certificate course on Innovative Construction Technologies entitled NAVARITI, New Affordable Validated Research Innovation Technologies for Indian Housing. As regards innovative systems, information is available in bits and pieces and there are no textbooks available summarizing all these systems. Therefore, the reading material in form of a book for the course was prepared and published as the first edition of the book. The experts from industry, academic institutions, research laboratories have contributed various chapters of the book. In addition, information from various resources has been collected and compiled in concise form to develop the book. The second edition of the book contains updated information along with few new chapters since the last publication. The book is a collection of technical information available on technologies worldwide and it is the first of its kind on the subject. We are sure it will help the readers to comprehend these innovative systems and implement them in their future construction projects.

Why Do Buildings Collapse in Earthquakes? Building for Safety in Seismic Areas Robin Spence, Emily So, 2021-08-09

WHY DO BUILDINGS COLLAPSE IN EARTHQUAKES Learn from the personal experience and insights of leading earthquake engineering specialists as they examine the lessons from disasters of the last 30 years and propose a path to earthquake safety worldwide. **Why Do Buildings Collapse in Earthquakes: Building for Safety in Seismic Areas** delivers an insightful and comprehensive analysis of the key lessons taught by building failures during earthquakes around the world. The book uses empirical evidence to describe the successes of earthquake engineering and disaster preparedness as well as the failures that may have had tragic consequences. Readers will learn what makes buildings in earthquake zones vulnerable, what can be done to design, build, and maintain those buildings to reduce or eliminate that vulnerability, and what can be done to protect building occupants. Those who are responsible for the lives and safety of building occupants and visitors—architects, designers, engineers, and building owners or managers—will learn how to provide adequate safety in earthquake zones. The text offers useful and accessible answers to anyone interested in natural disasters generally and those who have specific concerns about the impact of earthquakes on the built environment. Readers will benefit from the inclusion of a thorough introduction to how buildings have behaved in earthquakes, including a description of the world's most lethal earthquakes and the fatality trend over time. An exploration of how buildings are constructed around the world, including considerations of the impact of climate and seismicity on home design. A discussion of what happens during an earthquake, including the types and levels of ground motion, landslides, tsunamis, and sequential effects, and how different types of buildings tend to behave in response to those phenomena. What different stakeholders can do to improve the earthquake safety of their buildings. The owners and managers of buildings in earthquake zones and those

Faced with man made climate change and the need to provide housing for a growing world population society needs to rethink the way future buildings are made Wood is a truly renewable building material that is unlimited in supply if its growth and harvest are sustainably managed Recent technological advancements in engineering allow the use of timber for the construction of multi story structures turning our buildings into carbon sinks rather than becoming sources for CO2 emissions The book presents convincing arguments for the increased use of wood as an alternative to more fossil fuel intensive building materials with the goal of demonstrating that an integrated approach can have the potential for positive impact on the environment local economies and the building culture at large *International Housing and Town Planning Congress, Paris, 1928* International Federation for Housing and Planning,1928 XIX International Congress for Housing and Town Planning Zürich, 20-26 June 1948 ,1948 *Minnesota Forest Products Marketing Bulletin* ,1965
