Proceedings of the Second Meeting of the International Network of Salt-Affected Soils (INSAS) Food and Agriculture Organization of the United Nations,2023-10-24 The proceedings of the second meeting of the International Network of Salt Affected Soils INSAS contain the abstracts of the papers presented during the workshop in Tashkent 22-26 May 2023. The papers provide the up to date scientific knowledge and practical solutions for four topics: 1) mapping, assessing and monitoring of salt affected soils; 2) sustainable management of salt affected soils, practices and policy; 3) halophyte and saline agriculture and its effect on soil health; 4) integrated soil and water management under saline sodic conditions. Under the first topic, modern techniques, geophysics, remote sensing, NIR spectroscopy for mapping and monitoring of salt affected soils, as well as mapping of environmental susceptibility to soil salinization in dry regions were presented. Under the second topic, different approaches to reclaim saline and sodic soils and improve seed germination, including the use of different organic and inorganic amendments, organic biostimulants, biochar, and phytoremediation were discussed. Moreover, biodiversity of salt affected soils and its change along salinity gradient, as well as the impact of soil enzymes on the structure and function of soil microbial communities and how soil degradation is associated with specific soil microbiota were reported. Policy gaps on addressing soil salinity were analyzed, and further steps on how to integrate agenda on SAS into existing agricultural policies were proposed. The results of Participatory Rural Appraisal approach to survey among farmers were provided. Under the third topic, the results on testing different conventional and non-conventional crops in field trials on salt affected soils irrigated by fresh and saline water were reported. The influence of soil properties on growing halophytes was considered. Under the fourth topic, the ways to optimize the use of poor quality irrigation water in agriculture were discussed. Some studies reported about the results of modeling of salt and water transport in soils for estimation of leaching requirement or root zone soil salinity. Several studies reported about the negative aspects of using brackish water leading to secondary soil salinization and sodification. For salt affected areas with groundwater use for irrigation, the approach combining the Food Systems Approach and integrated water resources management was proposed to address the interdependent challenges of food and water security.
