Hawking Hawking Charles Seife,2021-04-06 Stephen Hawking was widely recognized as the world s best physicist and even the most brilliant man alive but what if his true talent was self promotion When Stephen Hawking died he was widely recognized as the world s best physicist and even its smartest person He was neither In Hawking Hawking science journalist Charles Seife explores how Stephen Hawking came to be thought of as humanity s greatest genius Hawking spent his career

grappling with deep questions in physics but his renown didn't rest on his science. He was a master of self-promotion, hosting parties for time travelers, declaring victory over problems he had not solved, and wooing billionaires. In a wheelchair and physically dependent on a cadre of devotees, Hawking still managed to captivate the people around him and use them for his own purposes. A brilliant exposé and powerful biography, *Hawking* uncovers the authentic Hawking buried underneath the fake. It is the story of a man whose brilliance in physics was matched by his genius for building his own myth.

Foundations of General Relativity Klaas Landsman, 2021-10-08. This book, dedicated to Roger Penrose, is a second mathematically oriented course in general relativity. It contains extensive references and occasional excursions in the history and philosophy of gravity, including a relatively lengthy historical introduction. The book is intended for all students of general relativity of any age and orientation who have a background including at least first courses in special and general relativity, differential geometry, and topology. The material is developed in such a way that through the last two chapters, the reader may acquire a taste of the modern mathematical study of black holes initiated by Penrose, Hawking, and others, as further influenced by the initial value or PDE approach to general relativity. Successful readers might be able to begin reading research papers on black holes, especially in mathematical physics and in the philosophy of physics. The chapters are: Historical introduction, General differential geometry, Metric differential geometry, Curvature, Geodesics and causal structure, The singularity theorems of Hawking and Penrose, The Einstein equations, The 3+1 split of space-time, Black holes I: Exact solutions and Black holes II: General theory. These are followed by two appendices containing background on Lie groups, Lie algebras, constant curvature, and on Formal PDE theory.
