Analysis Of Parallel Merge Sort Algorithm Citeseerx:

Multi-Criteria Decision-Making and Optimum Design with Machine Learning Van Thanh Tien Nguyen,Nhut T.M. Vo,Van Chinh Truong,Van-Thuc Nguyen,2024-12-11 As multicriteria decision making MCDM continues to grow and evolve machine learning ML techniques have become increasingly important in finding efficient and effective solutions to complex problems This book is intended to guide researchers practitioners and students interested in the intersection of ML and MCDM for optimal design Multi Criteria Decision Making and Optimum Design with Machine Learning A Practical Guide is a comprehensive resource that bridges the gap between ML and MCDM It offers a practical approach by demonstrating the application of ML and MCDM algorithms to real world problems Through case studies and examples it showcases the effectiveness of these techniques in optimal design The book also provides a comparative analysis of conventional MCDM algorithms and machine learning techniques enabling readers to make informed decisions about their use in different scenarios It also delves into emerging trends providing insights into future directions and potential opportunities The book covers a wide range of topics including the definition of optimal design MCDM algorithms supervised and unsupervised ML techniques deep learning techniques and more making it a valuable resource for professionals and researchers in various fields Multi Criteria Decision Making and Optimum Design with Machine Learning A Practical Guide is designed for professionals researchers and practitioners in engineering computer science sustainability and related fields It is also a valuable resource for students and academics who wish to expand their knowledge of machine learning applications in multicriteria decision making By offering a blend of theoretical insights and practical examples this guide aims to inspire further research and application of machine learning in multidimensional decision making environments **Parallel Sorting Algorithms** Selim G. Akl,2014-06-20 Parallel Sorting Algorithms explains how to use parallel algorithms to sort a sequence of items on a variety of parallel computers The book reviews the sorting problem the parallel models of computation parallel algorithms and the lower bounds on the parallel sorting problems The text also presents twenty different algorithms such as linear arrays mesh connected computers cube connected computers Another example where algorithm can be applied is on the shared memory SIMD single instruction stream multiple data stream computers in which the whole sequence to be sorted can fit in the respective primary memories of the computers random access memory or in a single shared memory SIMD processors communicate through an interconnection network or the processors communicate through a common and shared memory The text also investigates the case of external sorting in which the sequence to be sorted is bigger than the available primary memory In this case the algorithms used in external sorting is very similar to those used to describe internal sorting that is when the sequence can fit in the primary memory The book explains that an algorithm can reach its optimum possible operating time for sorting when it is running on a particular set of architecture depending on a constant multiplicative factor The text is suitable for computer engineers and scientists interested in parallel
