Process Equipment and Plant Design Subhabrata Ray, Gargi Das, 2020-05-29 *Process Equipment and Plant Design Principles and Practices* takes a holistic approach towards process design in the chemical engineering industry dealing with the design of individual process equipment and its configuration as a complete functional system. Chapters cover typical heat and mass transfer systems and equipment included in a chemical engineering curriculum such as heat exchangers, heat exchanger networks, evaporators, distillation, absorption, adsorption, reactors, and more. The authors expand on additional topics such as industrial cooling systems, extraction, and topics on process utilities, piping, and hydraulics, including instrumentation and safety basics that supplement the equipment design procedure and help to arrive at a complete plant design. The chapters are arranged in sections pertaining to heat and mass transfer processes, reacting systems, plant hydraulics, and process vessels, plant auxiliaries, and engineered safety, as well as a separate chapter showcasing examples of process design in complete plants. This comprehensive reference bridges the gap between industry and academia while exploring best practices in design, including relevant theories in process design, making this a valuable primer for fresh graduates and professionals working on design projects in the industry. Serves as a consolidated resource for process and plant design, including process utilities and engineered safety. Bridges the gap between industry and academia by including practices in design and summarizing relevant theories. Presents design solutions as a complete functional system and not merely the design of major equipment. Provides design procedures as pseudo code, flow chart, along with practical considerations.

Modeling and Simulation of Chemical Process Systems Nayef Ghasem, 2018-11-08 In this textbook, the author teaches readers how to model and simulate a unit process operation through developing mathematical models, equations, solving model equations manually, and comparing results with those simulated through software. It covers both lumped parameter systems and distributed parameter systems, as well as using MATLAB and Simulink to solve the system model equations for both. Simplified partial differential equations are solved using COMSOL, an effective tool to solve PDE using the finite element method. This book includes end-of-chapter problems and worked examples and summarizes reader goals at the beginning of each chapter.

Adsorptive Separation Process for Water and Gaseous Air Pollution Control Tushar Kanti Sen, 2026-01-22 Adsorption is one of the efficient, cost-effective separation processes that is in use for the removal of water and gaseous pollutants. This book provides a balanced mix of fundamental adsorption theory and application, with a compilation of up-to-date developments and trends. It presents fundamental and advanced knowledge on solid-liquid and gas-solid separation unit operations and critically discusses the reaction-based mechanism of adsorption and adsorptive parameters estimation. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the

subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

Chitosan Based Materials and its Applications Sergio Paulo Campana-Filho, Luiz Antonio de Almeida Pinto, 2017-06-07
