The Potential Production Of Aromatic Compounds In Flowers:

Breeding of Ornamental Crops: Bulbous Flowers Muneeb Ahmad Wani, Jameel M. Al-Khayri, Shri Mohan Jain, 2025-03-28
Flowers and other ornamental plants are used for all social occasions. Consumers' preferences dictate the development of novel flower traits such as fragrance, flower color, and shape, early flowering, less water consumption, and long shelf life. The worldwide floricultural industry is worth over 50 billion Euros and can serve as a component of food security, influence socio-economic development, and generate employment. The ornamental industry is regarded as one of the fastest growing farm industries. This industry is sustained through novelty; thus, there is an increasing demand for plant breeders in both public and private sectors to fulfill consumers' needs. Biotechnological approaches such as genetic transformation, genomics, nanobiotechnology, and gene editing are well suited for designing custom-made novel traits of flowers benefiting both the ornamental and cosmetic industries. Moreover, micropropagation is well exploited commercially for large-scale plant production along with vertical and digital farming and artificial intelligence, especially by the floriculture industry. This book focuses on advances in breeding strategies of bulbous flower ornamental plants. Each chapter, contributed by eminent authors, is devoted to an individual ornamental species or a group of related species. It provides an in-depth understanding of modern breeding strategies, including traditional methods and biotechnological approaches. Topics covered in each chapter, in relation to the subject species, include current cultivation practices and challenges, germplasm biodiversity, and conservation, traditional breeding, molecular breeding, tissue culture applications, genetic engineering, and gene editing, mutation breeding, hybridization, and future research directions. Major concepts are illustrated with color photos. Melatonin: Role in Plant Signaling, Growth and Stress Tolerance Soumya Mukherjee, Francisco J. Corpas, 2023-08-31
The new edited volume on phyto-melatonin and its diverse roles in plants under a challenging environment shall be an important reference book with updated information and future perspectives on the involvement of this biomolecule in stress resilience in plants. Investigations on different aspects of melatonin in plants have undergone a prolific surge in the last decade. In view of such a considerable volume of investigations in melatonin, the proposed new volume will collate its role in different aspects of plants: signaling, growth, and metabolism. In this context, it has been important to understand its function as a stress-priming molecule that executes associative synergistic relations with various other plant growth regulators, viz. nitric oxide, hydrogen sulfide, inorganic ions, and enzymes. Thus, crop management under diverse stressful environments can be better achieved by elucidating our current understanding of the role of melatonin and its interplay with various plant metabolites. The book shall provide a collation of recent advancements in genomic, transcriptomic, and metabolomic approaches to decipher the molecular mechanisms of melatonin signaling and its agronomic importance in plants. **Handbook of Fruit and Vegetable Flavors** Y. New Perspectives on the Biology of Nectaries and Nectars Clay Carter, Robert W. Thornburg, Massimo Nepi, 2019-08-27 The number of currently known described and accepted plant species is ca 374 000 of which approximately 295 00 79% are angiosperms Almost 90% of this huge number of flowering plants is pollinated by animals mostly insects via nectar mediated interactions Notably three fourths of the leading global crop plants produce nectar and are animal pollinated which is estimated to account for one third of human food resources Nectar can also be produced on tissues outside of flowers by so called extrafloral nectaries and commonly mediate interactions with body guard ants and other pugnacious insects that defend the plant from herbivores Extrafloral nectar is present in almost 4 000 plant species a majority of them in the angiosperms This brief summary on the occurrence of nectar in the plant kingdom is just to highlight that nectar has a fundamental role in two basal functions that allow the maintenance of our ecosystems sexual plant reproduction and protection of plants from herbivory Despite playing essential ecological and evolutionary functions our current knowledge about nectar is largely incomplete however new research directions and perspectives on nectaries and nectars have arisen in recent years In the last two decades there were only a few moments in which nectar was the main character in international meetings or in published books In 2002 the first and only international meeting Nectar and nectary from biology to biotechnology dedicated exclusively to nectar and nectaries was held in Italy Montalcino Siena and in 2003 the proceedings were published in a special volume of *Plant Systematics and Evolution* 238 issue 1 4 In 2007 the book *Nectar and Nectaries* was published Springer with most of the contributions provided by authors that attended the meeting in Italy Another book dedicated to nectar was published in 2015 *Nectar Production Chemical Composition and Benefits to Animals and Plants* Nova Science Publishers covering aspects mainly related to nectar chemical composition and plant pollinator interactions Similarly symposia focused on nectar have been organized within the International Botanical Congress in 2011 and 2017 Considering that the last few years has yielded essential developments in the understanding of nectar biology we thought now is the moment to further stimulate research on this important topic This aim has been met through 18 papers published in our Research Topic **New Perspectives on the Biology of Nectaries and Nectars** with subjects spanning evolution and ecology to nectar chemistry and nectary structure
