INTRODUCTION

OVERVIEW OF DATA AND INFORMATION

In everyday usage, the two terms: **information** and **data** are always used interchangeably. There is, however, a difference between the two in computer studies. The digits "19896206" constitute data, but they convey no information. They could be interpreted as a student registration number or as a library catalogue number.

Data, therefore is the name given to basic facts such as names and numbers. Examples are times, dates, weights, prices, costs, numbers of items sold, employee names, product names, addresses, test scores etc. Some sources of data may include:

Questionnaire survey, Face – to face interview, Published document review, Telephone interview, Experimental recordings, Group techniques such as workshops, focus/ discussion groups, Public opinion pools, Library or database.

On the other hand **information** is data which has been converted into a more useful or intelligible form. Examples are printed documents, pay slips, text, reports, etc. So a set of words would be data but text would be information e.g. Obinna, Okafor are data. "Obinna Okafor scored the highest examination mark" is information.

Different types of questions/problems require different sources of information. Some sources of information include: Observations, people, speeches, documents such as, pictures, organizations, websites, etc. Let us take a look at the differences between data and information as shown in the Table below.

Differences between data and information

Data	Information
Data refers to names given to basic facts such as names, numbers. Examples are dates, addresses, times, prices, costs, etc	Information is data, which has been converted into a more meaningful form.
Data is facts and statistics that are collected in raw form.	Information is processed data that make meaning to someone.
Data is normally arranged into numbers, blocks and charts.	Information is normally represented in prose form.
Data is the lowest level of knowledge.	Information is the second level of knowledge.
Data by itself is not significant without processing.	Information is by itself significant.
Observation and recording is done to obtain data.	Analysis is done to obtain information.

Note that we use the term "communication" for transfer of information and the term "transmission" for the transfer of data.
