INTRODUCTION

COMPUTER HARDWARE

The hardware of a computer system consists of all the physical components that make up the system. These include the central processing unit (CPU), memory, storage devices, and input/output devices.

The CPU is the brain of the computer, responsible for executing instructions. Memory is used to store data and instructions that are currently being processed. Storage devices, such as hard drives and solid state drives, are used to store data permanently. Input/output devices, such as keyboards and mice, allow the user to interact with the computer.

Component	Description
Central Processing Unit (CPU)	The brain of the computer, responsible for executing instructions.
Memory	Used to store data and instructions that are currently being processed.
Storage Devices	Used to store data permanently, including hard drives and solid state drives.
Input/Output Devices	Allow the user to interact with the computer, including keyboards and mice.

The hardware of a computer system is essential for its operation. Without the physical components, the software would have no way to execute or store data. Understanding the hardware is the first step in understanding how a computer works.

The software of a computer system consists of all the programs and data that run on the hardware. This includes the operating system, application software, and user data. The operating system is the most important software component, as it manages the hardware and provides a platform for other software to run. Application software is used to perform specific tasks, such as word processing, spreadsheets, and web browsing. User data is the information that is created and used by the user.

The software of a computer system is essential for its operation. Without the programs and data, the hardware would be useless. Understanding the software is the second step in understanding how a computer works.

The hardware and software of a computer system are interdependent. The hardware provides the physical platform for the software to run, and the software manages the hardware and provides the user with a way to interact with the computer. Understanding both the hardware and software is essential for understanding how a computer works.

COMPUTER SOFTWARE

Software is the collection of programs and data that tell the computer what to do. It is the instructions that the computer follows to perform tasks. Software is divided into two main categories: system software and application software.

System software is the software that manages the hardware and provides a platform for other software to run. This includes the operating system, device drivers, and utility programs. Application software is the software that is used to perform specific tasks, such as word processing, spreadsheets, and web browsing.
