Chapter 2: The Chemical Context of Life

1 What is generally true about essential elements and living organisms?

[\(🔖 Concept 2.1\)](#)

SHOW HINT

Although all forms of life require iron, other elements are required only by certain species.

All organisms require 25 of the 92 naturally occurring elements to survive.

The elements carbon, hydrogen, nitrogen, and oxygen make up 20–25% of living mass.

Given their low concentrations in nature, the toxicity of some elements is generally not a factor in the evolution of biological communities.

Correct. Humans and other vertebrates require small amounts of iodine in their diets to maintain thyroid function. This is a requirement not observed among invertebrates.

2 If you were told that concentrations of trace elements above what is required by organisms generally have no effect on those organisms, what would you say?

[\(🔖 Concept 2.1\)](#)

SHOW HINT

False. Increasing the concentration of trace elements above what is required generally has a beneficial effect on organisms.
