*Fundamentals of Ceramics* Michel Barsoum, M. W. Barsoum, 2002-11-27 Updated and improved this revised edition of Michel Barsoum's classic text *Fundamentals of Ceramics* presents readers with an exceptionally clear and comprehensive introduction to ceramic science Barsoum offers introductory coverage of ceramics their structures and properties with a distinct emphasis on solid state physics and chemistry Key equations are derived from first principles to ensure a thorough understanding of the concepts involved The book divides naturally into two parts Chapters 1 to 9 consider bonding in

ceramics and their resultant physical structures and the electrical thermal and other properties that are dependent on bonding type The second part Chapters 11 to 16 deals with those factors that are determined by microstructure such as fracture and fatigue and thermal dielectric magnetic and optical properties Linking the two sections is Chapter 10 which describes sintering grain growth and the development of microstructure Fundamentals of Ceramics is ideally suited to senior undergraduate and graduate students of materials science and engineering and related subjects

**Methods for Phase Diagram Determination** Ji-Cheng Zhao, 2011-05-05 Phase diagrams are maps materials scientists often use to design new materials They define what compounds and solutions are formed and their respective compositions and amounts when several elements are mixed together under a certain temperature and pressure This monograph is the most comprehensive reference book on experimental methods for phase diagram determination It covers a wide range of methods that have been used to determine phase diagrams of metals ceramics slags and hydrides Extensive discussion on methodologies of experimental measurements and data assessments Written by experts around the world covering both traditional and combinatorial methodologies A must read for experimental measurements of phase diagrams

computational methods applications to the results of research It provides an excellent source of information for a range of scientists such as materials scientists especially ceramicists metallurgists solid state physicists and chemists and mineralogists **Science Trends** ,1984
