Emerging Technologies in Agricultural Engineering Megh R. Goyal, 2017-09-01 This book covers an array of issues on emerging agricultural engineering and technology featuring new research and studies. The volume is broken into three parts: emerging technologies, energy management in agriculture, and management of natural resources, in which particular attention is paid to water management, a necessary consideration for successful crop production, especially in water scarce regions. Topics include alleviating drainage congestion, solar energy for agriculture, anaerobic digestion by inoculation with compost, self-propelled inter-cultivators, agrobiodiversity, watershed development and management. This volume offers academia, engineers, technologists, students, and others from different disciplines information to gain knowledge on the breadth and depth of this multifaceted field of agricultural engineering. There is an urgent need to explore and investigate the current shortcomings and challenges of the current innovations and challenges.

Food Process Engineering And Technology Akash Pare, B.L. Mandhyan, 2011-01-01 Food Process Engineering focuses on the design, operation, and maintenance of chemical and other process manufacturing activities. The development of Agro Processing will spur agricultural diversification. There are several benefits of promoting small scale agro processing units rather large scale for the promotion of rural entrepreneurship. Appropriate post harvest management and value addition to agricultural products in their production catchments will lead to employment and income generation in the rural sector and minimize the losses of harvested biomass. Adoption of suitable technology plays a vital role in fixing the cost of the final product and consequently makes the venture a profitable one. It is observed that imported agro processing machines or their imitations are used for preparing food products. Actually the working of these machines should be critically studied in context of the energy input and the quality of the finished product.
