Ecological Explosions Daniel Simberloff, 2026-01-16 A leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various distant islands and in North America In the nineteenth century biogeographers studying species distributions across the globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin began to describe the impacts of introduced species In the nineteenth and twentieth centuries as humans moved increasing numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem In *Ecological Explosions* invasive species expert Daniel Simberloff provides a thorough overview of the development of invasion science from early research including from the perspectives of leading scientists like Aldo Leopold to the field's future Simberloff explores the work of pioneering ecologists like Charles Elton antecedents of what became today's invasion biology before discussing the field's true emergence in the 1980s its explosive methodological and theoretical expansion its integration with other disciplines and its increasing visibility not only within the biological literature but also in government policies across the world in the 1990s Finally he investigates current controversies such as the debate over whether the entire science is xenophobic and asks how ecosystems might adapt to a rapidly globalizing world and ever increasing numbers of introduced species including the joro spider lionfish spotted lanternfly common reed and Asian carp

Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law Designing Greenways Paul Cawood Hellmund, Daniel Smith, 2013-03-05 How are greenways designed What situations lead to their genesis and what examples best illustrate their potential for enhancing communities and the environment Designing greenways is a key to protecting landscapes allowing wildlife to move freely and finding appropriate ways to bring people into nature This book brings together examples from ecology conservation biology aquatic ecology and recreation design to illustrate how greenways function and add value to ecosystems and human communities alike Encompassing everything from urban trail corridors to river floodplains to wilderness like linkages greenways preserve or improve the integrity of the landscape not only by stemming the loss of natural features but also by engendering new natural and social functions From 19th century parks and parkways to projects still on the drawing boards Designing Greenways is a fascinating introduction to the possibilities and pitfalls involved in these ambitious projects As towns and cities look to greenways as a new way of reconciling man and nature designers and planners will look to Designing Greenways as an invaluable compendium of best practices Isolated Vertebrate Communities in the Tropics Zoologisches Forschungsinstitut und Museum Alexander Koenig.
