Principles of Hydrology R. C. Ward, Mark Robinson, 2000 This book takes a non mathematical look at the principles and processes of hydrology Now in its fourth edition this well established book preserves the essential structure clarity and style which have ensured its continued international popularity over more than three decades However the book has been revised and fully updated to take into account new research and developments in the subject and the changing role of hydrology in the modern world The thematic treatment of the main phases of the hydrological cycle i e precipitation interception evaporation subsurface water and stream flow has been retained together with the chapter on water quality A final synthesising chapter has been reinstated by popular demand together with a broader spectrum of case studies and examples A selection of problems and exercises has also been included at the end of each chapter **Hydrology M.**

Robinson, R. C. Ward, 2017-02-15 The book comprises nine chapters with seven core chapters dealing in detail with the basic principles and processes of the main hydrological components of the water cycle precipitation interception evaporation soil water groundwater streamflow and water quality It takes a broadly non mathematical approach although some numeracy is assumed particularly in the treatment of evaporation and soil water The introductory and concluding chapters show the relations and interactions between these components and also put the importance of water into a wider human context its significant role in human history its key role today and potential role in future in the light of climate change and increasing global population pressures The book is thoroughly up to date contains over 100 diagrams and photographs to explain and amplify the concepts described and contains over 750 references for further study **Forests, Water and People in the**

Humid Tropics M. Bonell, L. A. Bruijnzeel, 2004 *Forests Water and People in the Humid Tropics* is the most comprehensive review available of the hydrological and physiological functioning of tropical rain forests the environmental impacts of their disturbance and conversion to other land uses and optimum strategies for managing them The book brings together leading specialists in such diverse fields as tropical anthropology and human geography environmental economics climatology and meteorology hydrology geomorphology plant and aquatic ecology forestry and conservation agronomy The editors have supplemented the individual contributions with invaluable overviews of the main sections and provide key pointers for future research Specialists will find authenticated detail in chapters written by experts on a whole range of people water land use issues managers and practitioners will learn more about the implications of ongoing and planned forest conversion while scientists and students will appreciate a unique review of the literature *Introduction to Physical Hydrology* Martin

Hendriks, 2010-01-21 *Introduction to Physical Hydrology* explores the principal rules that govern the flow of water by considering the four major types of water atmospheric ground soil and surface It gives insights into the major hydrological processes and shows how the principles of physical hydrology inform our understanding of climate and global hydrology

Karst Hydrogeology and Geomorphology Derek Ford, Paul D. Williams, 2013-05-03 Originally published in 1989 Karst

Geomorphology and Hydrology became the leading textbook on karst studies This new textbook has been substantially revised and updated The first half of the book is a systematic presentation of the dissolution kinetics chemical equilibria and physical flow laws relating to karst environments It includes details of the many environmental factors that complicate their chemical evolution with a critique of measurement of karst erosion rates The second half of the book looks at the classification system for cave systems and the influence of climate and climatic change on karst development The book ends with chapters on karst water resource management and a look at the important issues of environmental management including environmental impact assessment environmental rehabilitation tourism impacts and conservation values Practical application of karst studies are explained throughout the text This new edition strengthens the book's position as the essential reference in the field Karst geoscientists will not dare to stray beyond arm's reach of this volume It is certain to remain the professional standard for many decades *Journal of Cave and Karst Studies* August 2007

Conserving Soil Resources European Society for Soil Conservation. International Congress, European Society for Soil Conservation, 1994 Environmental degradation in Europe is attracting increasing concern especially from farmers scientists and policy makers This book a collection of refereed papers from the First International Congress of the European Society for Soil Conservation covers the assessment prediction and modelling of soil degradation and the strategies used to combat the problem The current status of soil degradation is reported at both national and local levels and is related to natural processes such as desertification or to mismanagement of the environment through agricultural or industrial activities The consequences of soil degradation include loss of soil fertility and nutrients declining land productivity and the detrimental effects of sediment and associated contaminants on water quality There are critiques of the traditional methodologies used in soil erosion research including the use of erodibility and erosivity indices rainfall simulation and experimental erosion plots Other technologies such as geographical information systems and remote sensing are also applied to the study of degradation processes As well as chapters concerned with existing soil erosion models a new European Soil Erosion Model EUROSEM is described and tested The diverse nature of conservation measures currently used in Europe is presented ranging from evaluation of traditional methods such as bench terracing and the use of vegetation through to novel products such as soil conditioners and geotextiles The book includes contributions from many European soil scientists geographers and environmental scientists and will interest readers in these disciplines

The Protection and Conservation of Water Resources Hadrian F. Cook, 1998-06-11 This book is about water in Britain It is about resources their conservation protection of water quality for human consumption and aquatic ecosystems Presently there is a struggle to reverse long term trends towards contaminated groundwater polluted rivers and dirty beaches While farmers have to contend with fertiliser controls and sewage undertakings improve treatment industry is now under the most stringent pollution control measures in history Amidst the dash for more dishwashers and washing machines and in a country which prides itself on its gardening we are told the climate is changing and this may put further pressure on resources Meanwhile recent dry winters have compounded long term over abstraction problems reducing river flows and resulting in drought orders Since 1989 there has been privatisation of water and sewage undertakings and the loss of what was once a public service to commercial providers This has proved controversial and

anything from low reservoirs to highly paid water executives keeps water in the news year by year There have also been major changes in the environmental regulation of water with the creation of the National Rivers Authority and subsequently the Environment Agency and SEPA for Scotland There is now a relatively stable and regulated provision of water and sewerage services across England Scotland and Wales With the issues such as sustainable development demand management including leakage controls and environmental assessment driving water policy and planning there is a price to pay for investment and this has to be shifted towards the consumer This book explores all these aspects of Britain s water resources providing a comprehensive description of recent policy developments It is written for advanced students of environmental science and policy and for professionals in the water industry and regulatory bodies

Global Continental Palaeohydrology K. J. Gregory,L. Starkel,Victor R. Baker,1995 Palaeohydrological research is a comparatively recent development However research undertaken has already demonstrated a significant multidisciplinary impact and shown how palaeohydrology can provide an important contribution to the study of global change Although a considerable amount of exciting palaeohydrological research has been applied to particular areas there has not previously been a systematic approach to research into the palaeohydrology of the Earth s surface It was for this reason that a Commission was established by INQUA in 1991 on Global Continental Palaeohydrology This volume provides the background to that exciting international research project and has been written to provide a basis for understanding the current state of research into the palaeohydrology of the land surface of the Earth It therefore gives a summary of the work achieved to date and of the research investigations currently taking place together with an indication of the way in which palaeohydrological research relates to other global research programmes
