

VARIABLES AND PATTERNS

INVESTIGATION 1 NOTES

variable – a quantity that changes or varies. (It is represented by a letter.)

coordinate graph – a graph that displays data, by showing how two variables relate.

relationship – how one variable compares to the other.

y-axis – the vertical axis (going up and down).

x-axis – the horizontal axis (going left to right).

dependent variable – the variable that depends on the other, and you have control of this variable. The dependent variable goes on the y-axis.

independent variable – the variable that the other depends on, and you have NO control of this variable. The independent variable goes on the x-axis. (Any form of TIME goes on the x-axis.)

scale – the numbers you count by on the x and y-axis.

coordinate pair – the point on a graph where the x-value and y-value intersect. The first number is the x-coordinate, and the second number is the y-coordinate.

relationship – how two or more variables relate to each other. If one variable changes, the other variable must also change, and the change may be predictable.
