Principles of Behavioral Neurology M.-Marsel Mesulam, 1985

Clinical Neuroanatomy Hans J. ten Donkelaar, 2020-06-18 Connections define the functions of neurons information flows along connections as well as growth factors and viruses and even neuronal death can progress through connections Accordingly knowing how the various parts of the brain are interconnected to form functional systems is a prerequisite for properly understanding data from all fields in the neurosciences Clinical Neuroanatomy Brain Circuitry and Its Disorders bridges the gap between neuroanatomy and clinical neurology It focuses on human and primate data in the context of brain circuitry disorders which are so common in neurological practice In addition numerous clinical cases are presented to demonstrate how normal brain circuitry can be interrupted and what the effects are Following an introduction to the organization and vascularization of the human brain and the techniques used to study brain circuitry the main neurofunctional systems are discussed including the somatosensory auditory visual motor autonomic and limbic systems the cerebral cortex and complex cerebral functions In this 2nd edition apart from a general updating many new illustrations have been added and more emphasis is placed on modern techniques such as diffusion magnetic resonance imaging dMRI and network analysis Moreover a developmental ontology based on the prosomeric model is applied resulting in a more modern subdivision of the brain The new edition of Clinical Neuroanatomy is primarily intended for neurologists

neuroradiologists and neuropathologists as well as residents in these fields but will also appeal to neuro anatomists and all those whose work involves human brain mapping

Clinical Neuroanatomy John Mendoza, Anne Foundas, 2007-12-26 A major focus of clinical neuropsychology and cognitive behavioral neurology is the assessment and management of cognitive and behavioral changes that result from brain injury or disease In most instances the task of the neuropsychologist can be divided into one of two general categories Perhaps the most common is where patients are known to be suffering from identified neurological insults such as completed strokes neoplasms major head traumas or other disease processes and the clinician is asked to assess the impact of the resulting brain damage on behavior The second involves differential diagnosis in cases of questionable insults to the central nervous system Examples of the latter might be milder forms of head trauma anoxia and dementia or suspected vascular compromise In either instance understanding the underlying pathology and its consequences depends in large part on an analysis of cognitive and behavioral changes as well as obtaining a good personal and medical history The clinical investigation will typically include assessing problems or changes in personality social and environmental adaptations affect cognition perception as well as sensorimotor skills Regardless of whether one approaches these questions having prior independent confirmation of the pathology versus only a suspicion of pathology a fairly comprehensive knowledge of functional neuroanatomy is considered critical to this process Unfortunately as neuropsychologists we too frequently adopt a corticocentric view of neurological deficits We recognize changes in personality memory or problem solving capacity as suggestive of possible cerebral compromise

Neurocognitive Disorders in Aging Daniel Kempler, 2005 Daniel Kempler describes the common disorders that can cause cognitive behavioural impairments in the elderly He offers guidance on how to identify abnormal behaviour how to make inferences about the underlying pathology likely diagnoses possible treatment of those disorders
