Generative Artificial Intelligence and Ethics: Standards, Guidelines, and Best Practices Gaur, Loveleen, 2024-10-10 The rapid advancement of generative artificial intelligence AI has brought about significant ethical challenges As machines become more adept at creating human like content concerns about misuse bias privacy and accountability have emerged Without clear guidelines and regulations there is a risk of unethical use such as creating deepfake videos or disseminating misinformation which could have severe societal consequences Additionally questions about intellectual property rights and the ownership of AI generated creations still need to be solved further complicating the ethical landscape The book Generative Artificial Intelligence and Ethics Standards Guidelines and Best Practices comprehensively solves these ethical challenges By providing insights into the historical development and key milestones of Generative AI the book lays a foundation for understanding its complex ethical implications It examines existing ethical frameworks and proposes new ones tailored to AI s unique characteristics helping readers apply traditional ethics to AI development and deployment

Advances in Artificial Intelligence, Robotics, Augmented and Virtual Reality in Neurosurgery Mohammed Ali Alvi, 2024-03-18 **Cross-Modal Learning: Adaptivity, Prediction and Interaction** Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By

focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience

Vortex Ventilation Arslan Malikovich

Ziganshin, Konstantin Ivanovich Logachev, 2025-08-04 Vortex Ventilation Shaped Units of Energy Saving Ventilation Systems presents innovative methods for optimizing ventilation systems through vortex zone and computational fluid dynamics analysis. The research explores separated flows in ventilation elements offering insights for students and professionals. The work introduces computational fluid dynamics methods to map vortex zones in duct fittings enabling energy efficient designs. Strategic shaping along these zones reduces aerodynamic resistance decreasing energy consumption and operating costs. This approach allows for smaller fan sizes and reduced capital costs across entire systems. Key features include Numerical and experimental research algorithms. Discrete vortex method applications. Geometric similarities in vortex zone patterns. Universal shapes for specific duct fittings. Future development opportunities encompass enhanced fitting elements expanded system components and investigation of secondary vortex zones and contamination effects. This book significantly advances technical science by addressing energy consumption reduction providing practical methodologies for designers to create more efficient and cost effective ventilation systems.
