Statistical Methods In Bioinformatics Abbookthub:

Statistical Methods in Bioinformatics Warren J. Ewens, Gregory R. Grant, 2013-03-09 Advances in computers and biotechnology have had an immense impact on the biomedical fields with broad consequences for humanity Correspondingly new areas of probability and statistics are being developed specifically to meet the needs of this area There is now a necessity for a text that introduces probability and statistics in the bioinformatics context This book also describes some of the main statistical applications in the field including BLAST gene finding and evolutionary inference much of which has not yet been summarized in an introductory textbook format This book grew out of the bioinformatics courses given at the University of Pennsylvania The material is however organized to appeal to biologists or computer scientists who wish to know more about the statistical methods of the field as well as to trained statisticians who wish to become involved in bioinformatics The earlier chapters introduce the concepts of probability and statistics at an elementary level Later chapters should be immediately accessible to the trained statistician Sufficient mathematics background consists of courses in calculus and linear algebra The basic biological concepts that are used are explained or can be understood from the context

Ewens, Gregory R. Grant, 2008-11-01 Advances in computers and biotechnology have had a profound impact on biomedical research and as a result complex data sets can now be generated to address extremely complex biological questions Correspondingly advances in the statistical methods necessary to analyze such data are following closely behind the advances in data generation methods The statistical methods required by bioinformatics present many new and difficult problems for the research community This book provides an introduction to some of these new methods The main biological topics treated include sequence analysis BLAST microarray analysis gene finding and the analysis of evolutionary processes The main statistical techniques covered include hypothesis testing and estimation Poisson processes Markov models and Hidden Markov models and multiple testing methods The second edition features new chapters on microarray analysis and on statistical inference including a discussion of ANOVA and discussions of the statistical theory of motifs and methods based on the hypergeometric distribution Much material has been clarified and reorganized The book is written so as to appeal to biologists and computer scientists who wish to know more about the statistical methods of the field as well as to trained statisticians who wish to become involved with bioinformatics The earlier chapters introduce the concepts of probability and statistics at an elementary level but with an emphasis on material relevant to later chapters and often not covered in standard introductory texts Later chapters should be immediately accessible to the trained statistician Sufficient mathematical background consists of introductory courses in calculus and linear algebra The basic biological concepts that are used are explained or can be understood from the context and standard mathematical concepts are summarized in an Appendix Problems are provided at

Statistical Bioinformatics Jae K. Lee, 2010 **Statistical Bioinformatics with R** Sunil K. Mathur, 2009-12-21 Statistical Bioinformatics provides a balanced treatment of statistical theory in the context of bioinformatics applications Designed for a one or two semester senior undergraduate or graduate bioinformatics course the text takes a broad view of the subject not just gene expression and sequence analysis but a careful balance of statistical theory in the context of bioinformatics applications The inclusion of R SAS code as well as the development of advanced methodology such as Bayesian and Markov models provides students with the important foundation needed to conduct bioinformatics Integrates biological statistical and computational concepts Inclusion of R SAS code Provides coverage of complex statistical methods in context with applications in bioinformatics Exercises and examples aid teaching and learning presented at the right level Bayesian methods and the modern multiple testing principles in one convenient book *Statistical Modelling in Biostatistics and Bioinformatics* Gilbert MacKenzie, Defen Peng, 2014-05-08 This book presents selected papers on statistical model development related mainly to the fields of Biostatistics and Bioinformatics The coverage of the material falls squarely into the following categories a Survival analysis and multivariate survival analysis b Time series and longitudinal data analysis c Statistical model development and d Applied statistical modelling Innovations in statistical modelling are presented throughout each of the four areas with some intriguing new ideas on hierarchical generalized non linear models and on frailty models with structural dispersion just to mention two examples The contributors include distinguished international

statisticians such as Philip Hougaard John Hinde Il Do Ha Roger Payne and Alessandra Durio among others as well as promising newcomers Some of the contributions have come from researchers working in the BIO SI research programme on Biostatistics and Bioinformatics centred on the Universities of Limerick and Galway in Ireland and funded by the Science Foundation Ireland under its Mathematics Initiative

New Developments in Biostatistics and Bioinformatics Jianqing Fan, 2009 This book presents an overview of recent developments in biostatistics and bioinformatics Written by active researchers in these emerging areas it is intended to give graduate students and new researchers an idea of where the frontiers of biostatistics and bioinformatics are as well as a forum to learn common techniques in use so that they can advance the fields via developing new techniques and new results Extensive references are provided so that researchers can follow the threads to learn more comprehensively what the literature is and to conduct their own research In particular the book covers three important and rapidly advancing topics in biostatistics analysis of survival and longitudinal data statistical methods for epidemiology and bioinformatics

Statistical Methods in Molecular Evolution Rasmus Nielsen, 2005-04-21 In the field of molecular evolution inferences about past evolutionary events are made using molecular data from currently living species With the availability of genomic data from multiple related species molecular evolution has become one of the most active and fastest growing fields of study in genomics and bioinformatics Most studies in molecular evolution rely heavily on statistical procedures based on stochastic process modelling and advanced computational methods including high dimensional numerical optimization and Markov Chain Monte Carlo This book provides an overview of the statistical theory and methods used in studies of molecular evolution It includes an introductory section suitable for readers that are new to the field a section discussing practical methods for data analysis and more specialized sections discussing specific models and addressing statistical issues relating to estimation and model choice The chapters are written by the leaders of field and they will take the reader from basic introductory material to the state of the art statistical methods This book is suitable for statisticians seeking to learn more about applications in molecular evolution and molecular evolutionary biologists with an interest in learning more about the theory behind the statistical methods applied in the field The chapters of the book assume no advanced mathematical skills beyond basic calculus although familiarity with basic probability theory will help the reader Most relevant statistical concepts are introduced in the book in the context of their application in molecular evolution and the book should be accessible for most biology graduate students with an interest in quantitative methods and theory Rasmus Nielsen received his Ph D from the University of California at Berkeley in 1998 and after a postdoc at Harvard University he assumed a faculty position in Statistical Genomics at Cornell University He is currently an Ole R mer Fellow at the University of Copenhagen and holds a Sloan Research Fellowship His is an associate editor of the Journal of Molecular Evolution and has published more than fifty original papers in peer reviewed journals on the topic of this book From the reviews Overall this is a very useful book in an area of increasing importance Journal of the Royal Statistical Society I find Statistical Methods

in Molecular Evolution very interesting and useful It delves into problems that were considered very difficult just several years ago the book is likely to stimulate the interest of statisticians that are unaware of this exciting field of applications It is my hope that it will also help the wet lab molecular evolutionist to better understand mathematical and statistical methods

Marek Kimmel for the Journal of the American Statistical Association September 2006 Who should read this book We suggest that anyone who deals with molecular data who does not and anyone who asks evolutionary questions who should not ought to consult the relevant chapters in this book Dan Graur and Dror Berel for Biometrics September 2006 Coalescence theory facilitates the merger of population genetics theory with phylogenetic approaches but still there are mostly two camps phylogeneticists and population geneticists Only a few people are moving freely between them Rasmus Nielsen is certainly one of these researchers and his work so far has merged many population genetic and phylogenetic aspects of biological research under the umbrella of molecular evolution Although Nielsen did not contribute a chapter to his book his work permeates all its chapters This book gives an overview of his interests and current achievements in molecular evolution In short this book should be on your bookshelf Peter Beerli for Evolution 60 2 2006

New Developments in Biostatistics and Bioinformatics Jianqing Fan;Xihong Lin;Jun S.
