Machine Vision for Industry 4.0 Roshani Raut, Salahddine Krit, Prasenjit Chatterjee, 2022-03-22 This book discusses the use of machine vision and technologies in specific engineering case studies and focuses on how machine vision techniques are impacting every step of industrial processes and how smart sensors and cognitive big data analytics are supporting the automation processes in Industry 4.0 applications. Industry 4.0, the Fourth Industrial Revolution, combines traditional manufacturing with automation and data exchange. Machine vision is used in the industry for reliable product inspections, quality control, and data capture solutions. It combines different technologies to provide important information from the acquisition and analysis of images for robot-based inspection and guidance. Features: Presents a comprehensive guide on how to use machine vision for Industry 4.0 applications such as analysis of images for automated inspections, object detection, object tracking, and more. Includes case studies of Robotics Internet of Things with its current and future applications in healthcare, agriculture, and transportation. Highlights the inclusion of impaired people in the industry, for example, an intelligent assistant that helps deaf/mute individuals to transmit instructions and warnings in a manufacturing process. Examines the significant technological advancements in machine vision for Industrial Internet of Things and explores the commercial benefits using real-world applications from healthcare to transportation. Discusses a conceptual framework of machine vision for various industrial applications. The book addresses scientific aspects for a wider audience such as senior and junior engineers, undergraduate and postgraduate students, researchers, and anyone interested in the trends, development, and opportunities for machine vision for Industry 4.0 applications.

The Politics of Digital India Pradip Ninan Thomas, 2019-07-11 Transforming India into a digital state has been an objective of successive governments in India. However, the digital, by its very nature, is a capricious, multi-dimensional entity. Its operationalization across multiple sectors in India has highlighted the fact that the digital compact with publics in India is a two-edged sword. On the one hand, devices such as mobile phones have enabled access and efficiencies, and on the other, they have increased the scope for surveillance, capitalism, and the expansion of governmentality. The digital is at the same time a resource, commodity, and process that is absolutely fundamental to most, if not all, productive forces across multiple sectors. As a part of the Media Dynamics in South Asia series, this volume explores the making of digital India and specifically deals with the contradictions of an imperfect democracy: internal compulsions and external pressures that continue to play crucial roles in the shaping of the same. Mindful of the key roles played by political economy and context, and based on conversations with theory and practice, it makes a case for critical understanding of the digital embrace in India.
