Differential And Integral Coupled Systems: Impulsive And Integral Equations On Bounded And Unbounded

Domains Feliz Manuel Minhos,Robert De Sousa,2022-04-11 Boundary value problems on bounded or unbounded intervals involving two or more coupled systems of nonlinear differential and integral equations with full nonlinearities are scarce in

the literature The present work by the authors desires to fill this gap The systems covered here include differential and integral equations of Hammerstein type with boundary constraints on bounded or unbounded intervals These are presented in several forms and conditions three points mixed with functional dependence homoclinic and heteroclinic amongst others This would be the first time that differential and integral coupled systems are studied systematically The existence and in some cases the localization of the solutions are carried out in Banach space following several types of arguments and approaches such as Schauder's fixed point theorem or Guo Krasnosel'skiĭ fixed point theorem in cones allied to Green's function or its estimates lower and upper solutions convenient truncatures the Nagumo condition presented in different forms the concept of equiconvergence Carathéodory functions and sequences Moreover the final part in the volume features some techniques on how to relate differential coupled systems to integral ones which require less regularity Parallel to the theoretical explanation of this work there is a range of practical examples and applications involving real phenomena focusing on physics mechanics biology forestry and dynamical systems which researchers and students will find useful

MATLAB/Simulink Essentials: MATLAB/Simulink for Engineering Problem Solving and Numerical Analysis Sulaymon L. Eshkabilov, 2016-09-30 MATLAB Simulink Essentials is an interactive approach based guide for students to learn how to employ essential and hands on tools and functions of the MATLAB and Simulink packages to solve engineering and scientific computer problems which are explained and demonstrated explicitly via examples exercises and case studies The main principle of the book is based on learning by doing and mastering by practicing It contains hundreds of solved problems with simulation models via M files scripts and Simulink models related to engineering and scientific computing issues The audience of the book is not only limited to undergraduate students majoring in engineering and scientific computing areas but also postgraduate and research students and practicing engineers in industry and independent learners There are many hints and pitfalls indicating efficient usage of MATLAB Simulink tools and functions efficient programming methods and pinpointing most common errors occurred in programming and using MATLAB's built in tools and functions and Simulink modeling Every chapter ends with relevant drill exercises for self testing purposes Back cover **Introductory Guide to**
