

## STUDY GUIDE: ENERGY AND INFORMATION

### 6. Energy-Driven Inventions

#### 6.1 Living Systems Require a Flow of Energy

In a phrase, how do physicists define "energy"?

- "The ability to do work"

How would a cell biologist define "energy"?

- "The ability to make specific changes occur."

The physicist's definition of energy is not **comprehensive enough** for use in defining energy changes within a living cell.

List five major sorts or categories of energy change within the cell.

1. Biosynthesis
2. Movement
3. Concentration
4. Electrical Potential
5. Heat

On a cold day, which of the following processes do your cells depend on to maintain an operating temperature of 37 degrees Celsius?

- a. shivering
- b. muscle contraction
- c. respiration energy production
- d. metabolic heat generation
- e. all of the above

Sometimes the cell pumps substances against diffusion forces that would carry those substances the other way. What term would we give to this process?

**Energy of Concentration**

#### 6.2 Laws of Energy Flow in the Living World

**Energy** is freely convertible from one form to another but **energy** can never be created or destroyed.

Systems that **convert energy** from one form to another are not 100% efficient, thus the amount of useful energy **decreases**.

In nature, as energy freely changes from one form to another, the total amount of energy **remains constant**.
