Man Xu, Shan Gao, Jing-xuan Wang, 2024-09-21 Since the notorious terrorist attack of the World Trade Center in 2001 researchers and engineers have been forced to review the existing research works and standards in resisting the progressive collapse of structures From then on the design of structure against progressive collapse has tended toward quantitative design rather than qualitative design The collapse of the COVID 19 epidemic isolation hotel in Quanzhou China in 2020 and the vertical collapse of a 12 story apartment in Florida United States in 2021 have aroused an upsurge of the research on progressive collapse More experimental and theoretical works have been focused on this area This book addresses this issue and provides a valuable reference for the progressive collapse analysis and design of building structures Reviews latest references systematically in terms of experiments simulation and theory Introduces different test equipment used in the tests of progressive collapse and also modeling techniques used in the numerical studies of progressive collapse Includes performance prediction theories used in the analysis of progressive collapse Comprises considerable information on the tests and simulation and theoretical studies collected from the authors research in the last 10 years *Modern Steel Construction*, 2009 The Structural Engineer, 2000 **Design of Structures 2004** National Research Council (U.S.). Behaviour and Design of Steel and Composite

Connections in Fire Mostafa Jafarian, Yong Wang, 2023-02-17 Under fire conditions the strong interactions in structures result in different load carrying mechanisms and drastic redistributions of internal forces in structural members which are concentrated at and transferred via connections Fire safety depends on the performance of these connections including their temperature distribution and load carrying mechanisms and good performance ensures structural robustness in fire Behaviour and Design of Steel and Composite Connections in Fire is the only dedicated book on fire performance of connections in steel and composite structures Recent experimental and numerical studies from individual elements to whole real scale structures have indicated that connections are among the most vulnerable and critical parts of these structures This book synthesises the research findings on this important subject and explains the essential features in an accessible way in one single source The book is ideal for researchers structural engineers and fire protection engineers in their applications of performance based fire engineering

Design of Steel Structures to Eurocodes

Ioannis Vayas, John Ermopoulos, George Ioannidis, 2018-11-23 This textbook describes the rules for the design of steel and composite building structures according to Eurocodes covering the structure as a whole as well as the design of individual structural components and connections It addresses the following topics the basis of design in the Eurocodes framework the loads applied to building structures the load combinations for the various limit states of design and the main steel properties and steel fabrication methods the models and methods of structural analysis in combination with the structural imperfections and the cross section classification according to compactness the cross section resistances when subjected to axial and shear forces bending or torsional moments and to combinations of the above component design and more specifically the design of components sensitive to instability phenomena such as flexural torsional and lateral torsional buckling a section is devoted to composite beams the design of connections and joints executed by bolting or welding including beam to column connections in frame structures and alternative configurations to be considered during the conceptual design phase for various types of single or multi storey buildings and the design of crane supporting beams In addition the fabrication and erection procedures as well as the related quality requirements and the quality control methods are extensively discussed including the procedures for bolting welding and surface protection The book is supplemented by more than fifty numerical examples that

explain in detail the appropriate procedures to deal with each particular problem in the design of steel structures in accordance with Eurocodes The book is an ideal learning resource for students of structural engineering as well as a valuable reference for practicing engineers who perform designs on basis of Eurocodes
