Question

The current selected programming language is **C++14**. We emphasize the submission of a fully working code over partially correct but efficient code. Once **submitted**, you cannot review this problem again. You can use `cout` to debug your code. The `cout` may not work in case of syntax/runtime error. The version of **GCC** being used is **5.5.0**.

A student must solve an entire workbook of problems related to finding the area of intersection of two circles. Because the problems are all very similar, the student decides to write a program that can solve all these similar problems.

Input

The first line of the input consists of an integer $centerX_1$, representing the x coordinates of the center of the first circle.

The second line consists of an integer $centerY_1$, representing the y coordinates of the center of the first circle.

The third line consists of an integer $radius_1$, representing the radius of the first circle.

The fourth line consists of an integer $centerX_2$, representing the x coordinates of the center of the second circle.

The fifth line consists of an integer $centerY_2$, representing the y coordinates of the center of the second circle.

The last line consists of an integer $radius_2$, representing the radius of the second circle.

Output

Print a real number representing the area of intersection of two circles rounded up to 6 decimal places.

Constraints

$$0 < radius_1, radius_2 < 10^4$$

Example

Input:

```
