*Numerical Methods for Fluids, Part 3* P.G. Ciarlet, Jacques-Louis Lions, 1990 This book size article is dedicated to the numerical simulation of unsteady incompressible viscous flow modelled by the Navier Stokes equations or by non Newtonian variants of them In order to achieve this goal a methodology has been developed based on four key tools Time discretization by operator splitting schemes such as Peaceman Rachford s Douglas Rachford s Marchuk Yanenko s Strang s symmetrized and the so called theta scheme introduced by the author in the mid 1980s Projection methods in L2 or H1 for the treatment of the incompressibility condition  $\text{div } \mathbf{u} = 0$  Treatment of the advection by either a centered scheme leading to linear or nonlinear advection diffusion problems solved by least squares conjugate gradient

algorithms or to a linear wave like equation well suited to finite element based solution methods Space approximation by finite element methods such as Hood Taylor and Bercovier Pironneau which are relatively easy to implement conjugate gradient algorithms least squares methods for boundary value problems which are not equivalent to problems of the calculus of variations Uzawa type algorithms for the solution of saddle point problems embedding fictitious domain methods for the solution of elliptic and parabolic problems In fact many computational methods discussed in this article also apply to non CFD problems although they were mostly designed for the solution of flow problems Among the topics covered are the direct numerical simulation of particulate flow computational methods for flow control splitting methods for visco plastic flow a la Bingham and more It should also be mentioned that most methods discussed in this article are illustrated by the results of numerical experiments including the simulation of three dimensional flow easy to implement as is demonstrated by the fact that several practitioners in various institutions have been able to use them ab initio for the solution of complicated flow and other problems
