**The SAGE Encyclopedia of Quality and the Service Economy** Su Mi Dahlgaard-Park, 2015-05-29 Society globally has entered into what might be called the service economy. Services now constitute the largest share of GDP in most countries and provide the major source of employment in both developed and developing countries. Services permeate all aspects of people's lives and are becoming inseparable from most aspects of economic activity. Quality management has been a dominating managerial practice since World War II. With quality management initially associated with manufacturing industries, one might assume the relevance of quality management might decrease with the emergence of the service economy. To the contrary, the emergence of the service economy strengthened the importance of quality issues, which no longer are associated only with manufacturing industries but are increasingly applied in all service sectors as well. Today we talk not only about product or service quality but have even expanded the framework of quality to quality of life and quality of environment. Thus quality and services have emerged in parallel as

closely interrelated fields The Encyclopedia of Quality and the Service Economy explores such relevant questions as What are the characteristics nature and definitions of quality and services How do we define quality of products quality of services or quality of life How are services distinguished from goods How do we measure various aspects of quality and services How can products and service quality be managed most effectively and efficiently What is the role of customers in creation of values These questions and more are explored within the pages of this two volume A to Z reference work **Services**

Alexander, Ilfryn Price, 2013-05-02 The term Facilities Management has become global but fraught with confusion as to what the term signifies For some notably in the USA Facilities Management remains a discipline of human ecology Elsewhere the term has become conflated with an alternative meaning providing or outsourcing the provision of various services essential to the operation of particular buildings This volume redresses that imbalance to remind Facilities Management of its roots presenting evidence of Facilities Management success stories that engage the wider objectives of the organizations they serve and engaging students scholars and critical practitioners of general management with an appreciation of the power and influence of physical space and its place in the theory and practice of organizations This book includes management perspectives from outside the field to ensure that the issues raised are seen in an organizational and management context informing debate within the Facilities Management fraternity It draws on human ecology and the perspective of the firm as itself an intra organizational ecology of social constructs The ecology of a firm is not restricted to the firm's boundaries It extends to wider relationships between the firm and its stakeholders including in an age of outsourced building services the Facilities Management supply chain This volume offers arguments and evidence that managing such constructs is a key role for Facilities Management and an important participant in the provision of truly usable spaces *Trust and Partnership*
