## TAKING NOTES

Use the graphic organizer online to take notes on the physical geography of Pacific South America.

# Physical Geography

## If YOU lived there...

You and your family fish for herring in the cold waters off the coast of Peru. Last year, however, an event called El Niño changed both the weather and the water. El Niño made the nearby ocean warmer. Without cold water, all the herring disappeared. You caught almost no fish at all. El Niño also caused terrible weather on the mainland.

### How might another El Niño affect you?

**BUILDING BACKGROUND** Although most of the countries of Pacific South America lie along the coast, their landscapes are dominated by the rugged mountain range called the Andes. These mountains influence climates in the region. Ocean winds and currents also affect coastal areas here.

## Physical Features

The countries of Pacific South America stretch along the Pacific coast from the equator, for which the country of Ecuador is named, south almost to the Arctic Circle. One narrow country, Chile (CHEE-lay), is so long that it covers about half the Pacific coast by itself. Not all of the countries in Pacific South America have coastlines, however. Bolivia is landlocked. But all of the countries in this region do share one major physical feature—the high Andes mountains.

### Mountains

The Andes run through Ecuador, Peru, Bolivia, and Chile. Some ridges and volcanic peaks in the Andes rise more than 20,000 feet (6,800 m) above sea level. Because two tectonic plates meet at the region's edge, earthquakes and volcanoes are a constant threat. Sometimes these earthquakes disturb Andean glaciers, sending ice and mud rushing down mountain slopes.
