whether one is a white hat or a black hat hacker. The skills and tools are always neutral only when they are used for malicious purposes do they take a turn for the worse. What are the Objectives of Ethical Hacking? If hacking per se today is bent on stealing valuable information, ethical hacking on the other hand is used to identify possible weak points in your computer system or network and making them secure before the bad guys aka the black hat hackers use them against you. It's the objective of white hat hackers or ethical hackers to do security checks and keep everything secure. That is also the reason why some professional white hat hackers are called penetration testing specialists. One rule of thumb to help distinguish penetration testing versus malicious hacking is that white hat hackers have the permission of the system's owner to try and break their security. In the process if the penetration testing is successful the owner of the system will end up with a more secure computer system or network system. After all the penetration testing is completed the ethical hacker the one who's doing the legal hacking will recommend security solutions and may even help implement them. It is the goal of ethical hackers to hack into a system the one where they were permitted and hired to hack specifically by the system's owner but they should do so in a non-destructive way. This means that even though they did hack into the system they should not tamper with the system's operations. Part of their goal is to discover as much vulnerability as they can. They should also be able to enumerate them and report back to the owner of the system that they hacked. It is also their job to prove each piece of vulnerability they discover. This may entail a demonstration or any other kind of evidence that they can present. Ethical hackers often report to the owner of the system or at least to the part of a company's management that is responsible for system security. They work hand in hand with the company to keep the integrity of their computer systems and data. Their final goal is to have the results of their efforts implemented and make the system better secured.
