In solving a torque balancing homework problem for a beam in static equilibrium, where must we put the axis of rotation? - correct answer ✓ Wherever we want to.

Consider a bicycle parked on a hill and pick the axis of rotation to pass through the point where the front tire touches the ground. The weight of the bicycle exerts a torque about this axis. What other forces on the bicycle will also exert a torque about this axis? - correct answer ✓ The normal force on the back wheel only.

If only two forces act on a body and the body is in static equilibrium, which of the

statements below must be true? - correct answer ✓ D) The two forces must be equal in magnitude and opposite in direction to satisfy the first condition of equilibrium, that all the forces must cancel. The second condition, that the torques must cancel, requires that they act along the same line. If they acted along different lines, then they would create a net torque.

- a. The two forces are equal in magnitude and opposite in direction.
- b. The two forces act along the same line.
- c. The two forces must act in the same plane as each other.
