Systems Thinking and Complexity Science Kurt Anders Richardson,Kurt

Antony Richardson, Wendy J. Gregory, Gerald Midgley, 2006 Systems Thinking, System Dynamics Kambiz E. Maani, R. Y. Cavana, 2007 Systems Thinking System Dynamics offers readers a comprehensive introduction to the growing field of systems thinking and dynamic modelling and its applications The book provides a self contained and unique blend of qualitative and quantitative tools step by step methodology numerous examples and mini cases as well as extensive real life case studies The content mix and presentation style make the otherwise technical tools of systems thinking and system dynamics accessible to a wide range of people This book is intended as a text for students in diverse disciplines including business and management as well as the social environmental health and applied sciences It also has particular relevance for professionals from all backgrounds interested in understanding the dynamic behaviour of complex systems change management complex decision making group problem solving and organisational learning Systems thinking and system dynamics provide a scientific paradigm a set of tools and computer technology which can help explain the forces and dynamics that underlie change and complexity in business political social economic and environmental systems Using systems thinking and system dynamics makes it possible to examine and foresee the consequences of policy and strategic decisions implement fundamental solutions to chronic problems avoid mistakenly interpreting symptoms as causes test assumptions hypotheses and scenarios boost staff morale and improve productivity improve the stability and performance of supply chains find long term sustainable solutions and avoid fire fighting behaviour **Group Model Building** Rodney Scott, 2018-06-12 This book describes the cognitive and interpersonal effects of group model building and presents empirical research on what group model building achieves and how Further it proposes an integrated causal mechanism for the effects on participants There have been multiple previous attempts at explaining the effects of group model building on participants and this book integrates these various theories for the first time The causal mechanisms described here suggest a variety of design elements that should be included in group model building practice For example practitioners typically try to reduce complexity for clients to make the process feel more accessible In contrast the findings presented here suggest that the very act of muddling through complexity increases participants affective commitment to the group and the decisions made The book also describes implications for theory and practice System dynamics has traditionally been interested in using technical modeling processes to make policy recommendations Group model building demonstrates that these same techniques also have implications for group decision making as a method for negotiating agreement The book argues for the value of group model building as a mediating or negotiating tool rather than merely a positivist tool for technical problems *Systems Archetypes II* Daniel H.
