Maintenance Planning Patrick Lyonnet,1989-12-01

Maintenance Planning Patrick Lyonnet,2011-09-28 As the developments in engineering production techniques have resulted in an increasing dependence on automation the increasing complexity of these systems has made the reliability of the machines a matter of great importance An unexpected breakdown can be a very expensive experience for the company Further in the aerospace industry problems of reliability maintainability and availability are critical For a long time industrial research and training centres have been interested primarily in the problems of design manufacture and production recently however there has been a growing interest in the study of maintenance and reliability The concept of maintainability for example first appeared in 1954 in the US army Since then a variety of techniques and methodologies have been developed and implemented to meet the challenge of the new needs The aim of this book is to present these methods and investigate their effectiveness and in so doing to help practising engineers gain a better understanding of the problems The many examples and applications given here should make it a valuable teaching aid to students taking courses in engineering maintenance This second edition has been revised and enlarged to take account of the most recent developments and illustrate their application to the solution of problems It should also help to orient the reader to the modern concept of computer aided maintenance Introduction A maintenance service exists to keep equipment in running order and also to reduce the number of breakdowns

Warship Design ,1996 Solving Complex Maintenance Planning Optimization Problems Using Stochastic Simulation and Multi-Criteria Fuzzy Decision Making Sahar Tahvili,2014-10-16 Master s Thesis from the year 2014 in the subject Mathematics Applied Mathematics grade A Malardalen University language English comment Grade 5 Sweden excellence A abstract The main goal of this project is to explore the use of stochastic simulation genetic algorithms fuzzy decision making and other tools for solving complex maintenance

planning optimization problems We use two different maintenance activities corrective maintenance and preventive maintenance Since the evaluation of specific candidate maintenance policies can take a long time to execute and the problem of finding the optimal policy is both non linear and non convex we propose the use of genetic algorithms GA for the optimization The main task of the GA is to find the optimal maintenance policy which involves 1 the probability of breakdown 2 calculation of the cost of corrective maintenance 3 calculation of the cost of preventive maintenance and 4 calculation of ROI Return On Investment Another goal of this project is to create a decision making model for multi criteria systems To find a near optimal maintenance policy we need to have an overview over the health status of the system components To model the health of a component we should find all the operational criteria that affect it We also need to analyze alternative maintenance activities in order to make the best maintenance decisions In order to do that the TOPSIS method and fuzzy decision making has been used To evaluate the proposed methodology internal combustion engine cooling of a typical Scania truck was used as a case study
