Hyperbolic Partial Differential Equations Nonlinear Theory:

Hyperbolic Partial Differential Equations Matthew Witten, 2014-05-17 *Hyperbolic Partial Differential Equations* Volume 1 Population Reactors Tides and Waves Theory and Applications covers three general areas of hyperbolic partial differential equation applications These areas include problems related to the McKendrick Von Foerster population equations other hyperbolic form equations and the numerical solution This text is composed of 15 chapters and begins with surveys of age specific population interactions populations models of diffusion nonlinear age dependent population growth with harvesting local and global stability for the nonlinear renewal equation in the Von Foerster model and nonlinear age dependent population dynamics The next chapters deal with various applications of hyperbolic partial differential equations to such areas as age structured fish populations density dependent growth in a cell colony boll weevil cotton crop modeling age dependent predation and cannibalism parasite populations growth of microorganisms and stochastic perturbations in the Von Foerster model These topics are followed by discussions of bifurcation of time periodic solutions of the McKendrick equation the periodic solution of nonlinear hyperbolic problems and semigroup theory as applied to nonlinear age dependent population dynamics Other chapters explore the stability of biochemical reaction tanks an ADI model for the Laplace tidal equations the Carleman equation the nonequilibrium behavior of solids that transport heat by second sound and the nonlinear hyperbolic partial differential equations and dynamic programming The final chapters highlight two explicitly numerical applications a predictor convex corrector method and the Galerkin approximation in hyperbolic partial differential equations This book will prove useful to practicing engineers population researchers physicists and mathematicians

Lectures on Nonlinear Hyperbolic Differential Equations Lars Hörmander, 1997-07-17 In this introductory textbook a revised and extended version of well known lectures by L H rmander from 1986 four chapters are devoted to weak solutions of systems of conservation laws Apart from that the book only studies classical solutions Two chapters concern the existence of global solutions or estimates of the lifespan for solutions of nonlinear perturbations of the wave or Klein Gordon equation with small initial data Four chapters are devoted to microanalysis of the singularities of the solutions This part assumes some familiarity with pseudodifferential operators which are standard in the theory of linear differential operators but the extension to the more exotic classes of opertors needed in the nonlinear theory is presented in complete detail

Hyperbolic Partial Differential Equations Andreas Meister, Jens Struckmeier, 2012-12-06 The following chapters summarize lectures given in March 2001 during the summerschool on Hyperbolic Partial Differential Equations which took place at the Technical University of Hamburg Harburg in Germany This type of meeting is originally funded by the Volkswa genstiftung in Hannover Germany with the aim to bring together well known leading experts from special mathematical physical and engineering fields of interest with PhD students members of Scientific Research Institutes as well as people from Industry in order to learn and discuss modern theoretical and numerical developments Hyperbolic partial differential

equations play an important role in various applications from natural sciences and engineering Starting from the classical Euler equations in fluid dynamics several other hyperbolic equations arise in traffic flow problems acoustics radiation transfer crystal growth etc The main interest is concerned with nonlinear hyperbolic problems and the special structures which are characteristic for solutions of these equations like shock and rarefaction waves as well as entropy solutions As a consequence even numerical schemes for hyperbolic equations differ significantly from methods for elliptic and parabolic equations the transport of information runs along the characteristic curves of a hyperbolic equation and consequently the direction of transport is of constitutive importance This property leads to the construction of upwind schemes and the theory of Riemann solvers Both concepts are combined with explicit or implicit time stepping techniques whereby the chosen order of accuracy usually depends on the expected dynamic of the underlying solution

Nonlinear Hyperbolic Equations and Field Theory M K V Murthy, S Spagnolo, 1992-03-30 Contains the proceedings of a workshop on nonlinear hyperbolic equations held at Varenna Italy in June 1990

Hyperbolic Partial Differential Equations Serge Alinhac, 2009-06-17 The aim of this book is to present hyperbolic partial differential equations at an elementary level In fact the required mathematical background is only a third year university course on differential calculus for functions of several variables No functional analysis knowledge is needed nor any distribution theory with the exception of shock waves mentioned below

All solutions appearing in the text are piecewise classical C^1 solutions Beyond the simplifications it allows there are several reasons for this choice First we believe that all main features of hyperbolic partial differential equations PDE well posedness of the Cauchy problem finite speed of propagation domains of determination energy inequalities etc can be displayed in this context We hope that this book itself will prove our belief Second all properties solution formulas and inequalities established here in the context of smooth functions can be readily extended to more general situations solutions in Sobolev spaces or temperate distributions etc by simple standard procedures of functional analysis or distribution theory which are external to the theory of hyperbolic equations The deep mathematical content of the theorems is already to be found in the statements and proofs of this book The last reason is this We do hope that many readers of this book will eventually do research in the field that seems to us the natural continuation of the subject nonlinear hyperbolic systems compressible fluids general relativity theory etc
