Desai, Musharraf Zaman, 2013-11-27 Soil structure interaction is an area of major importance in geotechnical engineering and geomechanics

Advanced Geotechnical Engineering Soil Structure Interaction using Computer and Material Models covers computer and analytical methods for a number of geotechnical problems. It introduces the main factors important to the application of computer methods and constitutive models with emphasis on the behavior of soils, rocks, interfaces and joints vital for reliable and accurate solutions. This book presents finite element (FE), finite difference (FD) and analytical methods and their applications by using computers in conjunction with the use of appropriate constitutive models; they can provide realistic solutions for soil structure problems. A part of this book is devoted to solving practical problems using hand calculations in addition to the use of computer methods. The book also introduces commercial computer codes as well as computer codes developed by the authors. Uses simplified constitutive models such as linear and nonlinear elastic for resistance displacement response in 1-D problems. Uses advanced constitutive models such as elastic-plastic, continued yield plasticity and DSC for microstructural changes leading to microcracking, failure and liquefaction. Delves into the FE and FD methods for problems that are idealized as two-dimensional (2-D) and three-dimensional (3-D). Covers the application for 3-D FE methods and an approximate procedure called multicomponent methods. Includes the application to a number of problems such as dams, slopes, piles, retaining reinforced earth structures, tunnels, pavements, seepage, consolidation involving field measurements, shake table and centrifuge tests. Discusses the effect of interface response on the behavior of geotechnical systems and liquefaction considered as a microstructural instability. This text is useful to practitioners, students, teachers and researchers who have backgrounds in geotechnical structural engineering and basic mechanics courses.

*Geotechnical Engineering (Soil Mechanics)* T. G. Sitharam, 2008. In this book a chapter on stability of slopes has been included as most of the universities cover this in the first course of Geotechnical Engineering. The contents of this volume are written at a basic level suitable for a first course in Geotechnical Engineering. This book highlights the basic principles of soil mechanics along with applications to many problems in Geotechnical Engineering. The material is covered in a very simple, clear and logical manner. A number of solved and exercise problems have been included in each chapter.

**Aquananotechnology** David E. Reisner, T. Pradeep, 2014-09-24. The world's fresh water supplies are dwindling rapidly even wastewater is now considered an asset. By 2025 most of the world's population will be facing serious water stresses and shortages. Aquananotechnology: Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use. It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods. The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species, UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies, produced water from fracking, ballast water and more. It also discusses membranes, desalination, sensing, engineered polymers, magnetic nanomaterials, electrospun nanofibers, photocatalysis, endocrine disruptors and Al<sub>13</sub> clusters. It explores physics

based phenomena such as subcritical water and cavitation induced sonoluminescence and fog harvesting With contributions from experts in developed and developing countries including those with severe contamination such as China India and Pakistan the book s content spans a wide range of the subject areas that fall under the aquanotechnology banner either squarely or tangentially The book strongly emphasizes sorption media with broad application to a myriad of contaminants both geogenic and anthropogenic keeping in mind that it is not enough for water to be potable it must also be palatable
